

# The `pageslts` package

H.-Martin Münch  
<Martin.Muench at Uni-Bonn.de>

2014/01/19 v1.2c

## Abstract

This package puts the labels `LastPage` (`\AtEndDocument`) and `VeryLastPage` (`\AfterLastShipout`) into the `.aux` file, allowing the user to refer to the (very) last page of a document. This might be particularly useful in places like headers or footers. When more than one page numbering scheme is used, these references do not give the total *number* of pages. For this case the label `LastPages` is introduced. Additionally, at the last page of each page numbering scheme a label `pagesLTS.<numbering scheme>` is placed, where `<numbering scheme>` is e.g. `arabic`, `roman`, `Roman`, `alph`, or `Alph`. For `fnsymbol` please use `\lastpageref{pagesLTS.fnsymbol}` instead of `\pageref{pagesLTS.fnsymbol}`. When the same numbering scheme is used twice, the page numbers are either reset to one or continued automatically, depending on the option given when the package is called. The command `\theCurrentPage` prints the current total/absolute page number – in contrast to `\thepage`, which gives only the page *name* in the current page numbering scheme. `\theCurrentPageLocal` gives the current number of pages in the current page numbering scheme. `\thepage` and `\theCurrentPageLocal` are different e.g. when `\addtocounter{page}{...}` or `\setcounter{page}{...}` were used. At the first page of the document a label `pagesLTS.0` is created. This label can be referred to, too. Further labels are provided for special cases.

The `alphalph` package is supported, i.e. page numbers `alph` or `Alph` > 26 and `fnsymbol` > 9 can be used (with according options set). Even zero and negative page numbers can be used with `arabic`, `alph`, `Alph`, `roman`, `Roman`, and `fnsymbol` page numbering (with `alphalph` package and according options).

`\pageref*` and `\lastpageref*`, for using `hyperref` but suppressing links, are supported.

**Please make sure to first deinstall the obsolete `pagesLTS` package before installing this `pageslts` package!**

(There is at least one operating system which otherwise automatically renames `pageslts` to `pagesLTS`.)

Right after `\begin{document}` a `\pagenumbering{...}` should be called – with the appropriate argument out of e.g. `arabic` (Arabic numerals: 1, 2, 3, 4, ...),

`roman` (Lowercase Roman numerals: i, ii, iii, iv, ...), `Roman` (Uppercase Roman numerals: I, II, III, IV, ...),

`alph` (Lowercase letters: a, b, c, d, ...), `Alph` (Uppercase letters: A, B, C, D, ...),

`fnsymbol` (Footnote symbols: \*, †, ‡, §, ...).

This package first started as a revision of the `lastpage` package of **Jeffrey P. Goldberg** (Thanks!), but then it became obvious that a replacement was needed.

# 1 Introduction

This package puts the labels `LastPage` (`\AtEndDocument`) (same as my `LastPage` package, invented by JEFFREY P. GOLDBERG) and `VeryLastPage` (`\AfterLastShipout`) into the `.aux` file, allowing the user to refer to the (very) last page of a document via `\lastpageref{LastPage}` and `\lastpageref{VeryLastPage}`. This might be particularly useful in places like headers or footers. When more than one page numbering scheme is used, these references do not give the total *number* of pages. For this case the label `LastPages` is introduced (similar to the label `TotPages` of the `TotPages` package, but the label `LastPages` is set later in the document). Additionally, at the last page of each page numbering scheme a label `pagesLTS.<numbering scheme>` is placed, where `<numbering scheme>` is e.g. arabic, roman, Roman, alph, or Alph. For `fnsymbol` please use `\lastpageref{pagesLTS.fnsymbol}` instead of `\pageref{pagesLTS.fnsymbol}`. When the same numbering scheme is used twice, the page numbers are either reset to one or continued automatically, depending on the option given when the package is called. The command `\theCurrentPage` prints the current total/absolute page number - in contrast to `\thepage`, which gives only the page *name* in the current page numbering scheme. `\theCurrentPageLocal` gives the current number of pages in the current page numbering scheme. `\thepage` and `\theCurrentPageLocal` are different e.g. when `\addtocounter{page}{...}` or `\setcounter{page}{...}` were used. (See also L<sup>A</sup>T<sub>E</sub>X bug 3421: 3rd page is even (twoside, titlepage, abstract), <http://www.latex-project.org/cgi-bin/ltxbugs2html?category=LaTeX&responsible=anyone&state=anything&keyword=pagenumber&pr=latex%2F3421&search=>.) At the first page of the document a label `pagesLTS.0` is created. This label can be referred to, too. Further labels are provided for special cases.

The `alphalph` package is supported, i.e. page numbers `alph` or `Alph` > 26 and `fnsymbol` > 9 can be used (with the according options set). Even zero or negative page numbers can be used with `arabic`, `alph`, `Alph`, and `fnsymbol` page numbering (with `alphalph` package and according options), and zero `roman` and `Roman` pages, too.

Right after `\begin{document}` a `\pagenumbering{...}` should be called – with the appropriate argument out of e.g. `arabic` (Arabic numerals: 1, 2, 3, 4,...), `roman` (Lowercase Roman numerals: i, ii, iii, iv,...), `Roman` (Uppercase Roman numerals: I, II, III, IV,...), `alph` (Lowercase letters: a, b, c, d,...), `Alph` (Uppercase letters: A, B, C, D,...), `fnsymbol` (Footnote symbols: \*, †, ‡, §,...).

This package first started as a revision of the `lastpage` package of JEFFREY P. GOLDBERG (Thanks!), but then it became obvious that a replacement was needed to accomplish what this package does.

**Trademarks** appear throughout this documentation without any trademark symbol; they are the property of their respective trademark owner. There is no intention of infringement; the usage is to the benefit of the trademark owner.

## logical page numbers

**Tip:** For the display of the pdf file use **logical page numbers** together with `hyperref`!

- In Adobe Reader XI (11.0.6) enable:  
`Edit > Preferences (Ctrl+k) > Page Display > Page Content and Information > Use logical page numbers` .
- Use the `hyperref` package with option `plainpages=false`.

The display will be e.g. “7 (7 of 9)”, or, in case of Roman instead of arabic numbers, “VII (7 of 9)”, and when different page numbers are used (see below) e.g. arabic after 10 Roman pages: “17 (27 of 30)”. Please try this with the compiled `pageslts-example` file!

The name of the `pageslts` package refers to Last, Total, and page numbering Schemes pages. `pagesLTS` was a former name of this package.

## 2 Usage

Just load the package placing

```
\usepackage[<options>]{pageslts}
```

in the preamble of your L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub> source file (about \AtEndDocument see subsection 3.2) and place a \pagenumbering{...} with appropriate argument (e.g. arabic, roman, Roman, fnsymbol, alph, or Alph) right behind \begin{document} (see subsubsection 2.3.1)!

For example for various draft forms it is desirable to have a page reference to the last page, so that e.g. page footers can contain something like “page  $N$  of  $K$ ”, where  $N$  is the current page and  $K$  is the last page. Once the package is loaded, anywhere in the text references can be made to the labels `LastPage`, `VeryLastPage`, and `LastPages` (most times with \pageref{...}, but more save with \lastpageref{...}). In particular one can use the `fancyhdr` or `nccfancyhdr` package, or redefinitions of the page headings and footings to get a reference to the (very) last page.

\pageref\* If the `hyperref` package is used, the references are hyperlinked to their aims. If these hyperlinks shall be suppressed, \lastpageref\* \pageref\*{...} and \lastpageref\*{...} can be used.

### 2.1 Options

options The `pageslts` package takes the following options:

#### 2.1.1 pagecontinue

pagecontinue When option `pagecontinue=false` is **not** given (i.e. `pagecontinue` or `pagecontinue=true` or no `pagecontinue` option at all), at each \pagenumbering{...} command the number of the page will be continued with the page number following the last page of the same page numbering scheme. For example, if there are V Roman pages in the frontmatter, some arabic ones in the mainmatter, and then Roman ones again in the backmatter, the last ones will start with VI instead of I again.

If you want to start with I (or i, 1, a, A, \*,...) again, set option `pagecontinue=false`. If you want to generally continue the numbers, but for some page numbering scheme do not want this, use `pagecontinue=true` and say \setcounter{page}{1} after \pagenumbering{...} for that page numbering scheme.

#### 2.1.2 alphMult, AlphMulti, fnsymbolmult

The page number printed in `fnsymbol`<sup>1</sup> must be  $> 0$  and  $< 10$  and those printed in `alph`<sup>2</sup> and `Alph`<sup>3</sup> must be  $> 0$  and  $< 27$ . After page Z L<sup>A</sup>T<sub>E</sub>X *should* continue with AA, AB, AC,... Some people prefer AA, BB, CC,..., but in hexadecimal it is  $AA_{16} = 170_{10}$  and  $171_{10} = AB_{16}$ , whereas  $BB_{16} = 187_{10}$ . In any way it should continue at all (maybe even with an user option to choose between the two continuations), but instead only gives an error:

```
LaTeX Error: Counter too large  
See the LaTeX manual or LaTeX Companion for explanation.  
You've lost some text. Try typing <return> to proceed.  
If that doesn't work, type X <return> to quit.
```

---

<sup>1</sup> \*, †, ‡, §, ¶, ||, \*\*, ††, ‡‡

<sup>2</sup>a, b, c, d, e, f, g, h, i, j, k, l, m, n, o, p, q, r, s, t, u, v, w, x, y, z

<sup>3</sup>A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V, W, X, Y, Z

But thanks to the `alphalph` package by HEIKO OBERDIEK these limitation no longer hold. With his `\erroralph` command now even negative or zero page “numbers” are possible.

- `alphMult` The string option `alphMult` takes three values: `ab`, `bb`, `0`:
- ab** After page z, the page “numbers” continue with aa, ab, ac, ad, ..., fxshrxw (the default), and before a with 0, -a, -b, ..., -z, -aa, -ab, ..., -fxshrxw (= -21 474 836 47).
  - bb** After page z, the page “numbers” continue with aa, bb, cc, dd, ..., and before a with 0, -a, -b, ..., -z, -aa, -bb, ...  
(Internally up to  $\pm 55\,834\,558$  is allowed, but when printed will exceed the L<sup>A</sup>T<sub>E</sub>X capacity even for smaller numbers – in the example file this happens at about 6 500.)  
(If you have a document with more than 6 500 pages, you might think about splitting it in volumes. And page “numbers” with about 100 digits are probably not easy to grasp for the reader, too.)
- 0** (zero) The `pageslts` package does nothing, thus the user is free to define the page “numbers” after z and before a.  
(But if the user does not do anything at all, the  
`LaTeX Error: Counter too large`  
will appear again.)
- `AlphMulti` The string option `AlphMulti` takes three values: `AB`, `BB`, `0`:
- AB** After page Z, the page “numbers” continue with AA, AB, AC, AD, ..., FXSHRXW (the default), and before A with 0, -A, -B, ..., -Z, -AA, -AB, ..., -FXSHRXW.
  - BB** After page Z, the page “numbers” continue with AA, BB, CC, DD, ..., and before A with 0, -A, -B, ..., -Z, -AA, -BB, ...  
(About the limits please see `alphMult` above.)
- 0** (zero) The `pageslts` package does nothing, thus the user is free to define the page “numbers” after Z and before A.  
(But if the user does not do anything at all, the  
`LaTeX Error: Counter too large`  
will appear again.)
- `fnsymbolmult` When option `fnsymbolmult=false` is **not** given (i.e. `fnsymbolmult` or `fnsymbolmult=true` or no `fnsymbolmult` option at all), after 5 (¶) the page “number” is continued with the doubled “number” of the first, second, third,... page (\*\*, ††, ‡‡, §§, ¶¶), and after the tenth page the “number” is tripled (\*\*\*, †††,...). Compile the `pageslts-example.tex` with pdfL<sup>A</sup>T<sub>E</sub>X and see the resulting pdf file.  
Before \* (page 1) the page “numbers” are continued with 0, -\*, -†, ..., -¶, -\*\*, -††, ...  
If this is not wanted, set option `fnsymbolmult=false`, and `pageslts` will do nothing and allow the user to change the page “number”. (But if the user does not do anything at all, the  
`LaTeX Error: Counter too large`  
will appear again.)  
While in L<sup>A</sup>T<sub>E</sub>X 2 <sub>$\varepsilon$</sub>  arabic (page) numbers are possible up to  $\text{MAX} = 2\,147\,483\,647$  (cf. the `alphalph` package), `\erroralph{\fnsymbolmult}{...}` numbers are possible up to 10 737 415 only. If this number is not only used internally but printed, after number about 11 705 (which is 2 341 times ¶) the L<sup>A</sup>T<sub>E</sub>X 2 <sub>$\varepsilon$</sub>  capacity is exceeded, depending on the remaining file and its use of T<sub>E</sub>X capacity, of course. (If you have a document with more than 11 705 pages, you might think about splitting it in volumes. And page “numbers” with 2 341 digits are probably not easy to grasp for the reader, too.)

### 2.1.3 romanMult, RomanMulti

- `romanMult` The options `romanMult=true` and `RomanMulti=true` expand the `\roman` and `\Roman` page numbering scheme to values below one ( $< 1$ ), i.e. 0, -i, -ii, -iii, -iv, ... and 0, -I, -II, -III, -IV, ..., respectively.  
`RomanMulti` Again the TeX capacity will be exceeded before  $\pm \text{MAX} = \pm 2\,147\,483\,647$ , and even if 1 000 000 000 is internally possible, this would print 1 000 000 times the letter m (or M), which would require either very small print or quite huge paper size.  
(If you have a document with so many pages, you might think about splitting it in volumes. And page “numbers” with thousands of digits are probably not easy to grasp for the reader, too.)  
If the expansion below 1 is not wanted, set options `romanMult=false` and/or `RomanMulti=false`, and `pagesLts` will do nothing and allow the user to change the page “number”. (But if the user does not do anything at all, L<sup>A</sup>T<sub>E</sub>X will just ignore the values – not even a warning will be issued.)

### 2.1.4 Arabic page numbers

- `Arabic page numbers` In L<sup>A</sup>T<sub>E</sub>X 2<sub>E</sub> arabic (page) numbers are already possible between `-MAX...MAX`, where `MAX = 2 147 483 647` (cf. the `alphalph` package), without any expansion necessary. (But if you have a document with so many pages, you might think about splitting it in volumes!)

## 2.2 Labels

- `pagesLTS.0` At the first page a label `pagesLTS.0` is created. If `\pagenumbering{...}` is used right after `\begin{document}`, this is much easier for the `pagesLts` package (and chances for successful placing of all labels are much higher; cf. subsubsection 2.3.2).

- `LastPage` `\AtEndDocument` (see subsection 3.2) this package defines a label, `LastPage`, which the user can refer to with the `\lastpageref{LastPage}` command. While `\pageref{LastPage}` is also possible (especially for backward compatibility with the `LastPage` package), this is discouraged, because it will not work when it is used together with the `hyperref` package and the `fnsymbol` page numbering scheme. (The `LastPage` package did not work with this combination, too, so if you want to, you can reproduce the old error – but you do not have to do it, but can use `\lastpageref{LastPage}`.)

- `VeryLastPage` `\AfterLastShipout` the label `VeryLastPage` is defined, which the user can also refer to with the `\lastpageref{VeryLastPage}` command. Depending on usage of `\AtEndDocument` by other packages, `LastPage` might not point to the very last page, but `\lastpageref{VeryLastPage}` should do this (cf. subsection 3.2).

- `LastPages`  
`page number`  
`number of pages` When more than one page numbering scheme is used, neither `LastPage` nor `VeryLastPage` give the total **number** of pages. For example, for a document with VI+36 pages, both give “36” as reference to the last page. While this is correct, the total number of pages is 42, and this is given by the reference to `LastPages`: `\lastpageref{LastPages}` (note the “s” at the end). When the page number was manipulated by `\addtocounter{page}{...}` or `\setcounter{page}{...}`, `LastPages` ignores this. (At a page numbering change the page is reset to one (without option `pagecontinue`). This is done by `\setcounter{page}{1}`, thus this is ignored, too.)

`\pageref{totpages}` of the `totpages` package is similar to `\lastpageref{LastPages}`, but while the target for `\pageref{totpages}` is placed `\AtEndDocument`, the target for `\lastpageref{LastPages}` is placed `\AfterLastShipout`, therefore `\lastpageref{LastPages}` is safer to really get the total page number.

\theCurrentPage \theCurrentPage gives the current total/absolute page, in contrast to \thepage, which gives only the page *name* in the current page numbering scheme. For example, when there are Roman VII pages in the frontmatter and afterwards in the mainmatter you are at arabic page 9, then \theCurrentPage is 16, whereas \thepage is 9. When the page “number” (name) is manipulated by \addtocounter{page}{...} or \setcounter{page}{...}, \theCurrentPage ignores this. Because CurrentPage is a normal counter, you can also say e.g. \Roman{CurrentPage} to get the value in Roman page numbering scheme (e.g. VIII for 8).

\theCurrentPageLocal \theCurrentPageLocal gives the current (arabic) number of pages in the current page numbering scheme. \thepage and \theCurrentPageLocal are different e.g. when \addtocounter{page}{...} or \setcounter{page}{...} were used. \theCurrentPageLocal can be printed in other formats, e.g. \roman{pagesLTS.current.local.roman}, but probably it only makes sense if page numbering scheme and format are the same, e.g. \Roman{pagesLTS.current.local.Roman} or \Alph{pagesLTS.current.local.Alph}. \arabic{pagesLTS.current.local....} probably make sense even when combined with another page numbering scheme. And this is exactly what \theCurrentPageLocal does:  
\def\theCurrentPageLocal{\arabic{pagesLTS.current.local.\pagesLTS@pnc}}.

agesLTS. page numbering scheme . number If you want to refer to the last page of the first, second,... use of a page numbering scheme, you can refer to pagesLTS.<page numbering scheme>.<number>, e.g. \lastpageref{pagesLTS.Roman.1}, where <number> is the occurrence of the page numbering scheme. For details please see page 9.

\lastpageref For pages with the fnsymbol page numbering scheme, \lastpageref{...} instead of \pageref{...} *must* be used. This is required for pages somewhere inside of the document as well as the (very) last page(s). Because \lastpageref{...} is a synonym for \pageref{...}, where no fnsymbol page numbering scheme is used, it is save(r) to use it for all references to labels provided by the pageslts package.

## 2.3 \pagenumbering{...}

\pagenumbering

### 2.3.1 If \pagenumbering{...} is not used

When the pageslts package is used, but \pagenumbering{...} (with an argument like arabic, roman, Roman, fnsymbol, alph, or Alph) is not used, there should be no problem, except that you might need more (!) compiler runs to get all references right, and some references might even be missing (see below). The pageslts package tries to determine the page numbering scheme at the first shipout, but success is not guaranteed. Thus please use \pagenumbering{...} at the beginning of your document!

Without \pagenumbering{<something>} (<something> e.g. = arabic) at the beginning of the document, the page numbers might be given in arabic *by* (class) *default*, but the pageslts package does not know about this without \pagenumbering{arabic}. –

The label pagesLTS.0 is created at the first page even if no \pagenumbering{...} command is given. Maybe have a look at the .aux file after compiling your document to detect further labels (of other packages, too).

### 2.3.2 If `\pagenumbering{...}` is used once

`pagesLTS.0` At the first page a label `pagesLTS.0` is created. If `\pagenumbering{...}` is used right after `\begin{document}`, this is much easier for the `pageslts` package (and chances for successful placing of all labels are much higher).

### 2.3.3 If `\pagenumbering{...}` is used more than once

Everything from the preceding subsubsections applies and additionally the following:

When different page numbering schemes are used, e.g. Roman numbers for the frontmatter and arabic numbers for the mainmatter, please use `\pagenumbering{...}` for each of them! Even if you do this, the reference to neither the label `LastPage` nor the label `VeryLastPage` gives the **total** number of pages, but only the number of pages of the last used page numbering scheme (which could be exactly what you want, e.g. if you want to refer to the last page itself and do not want to give the total number of pages).

`LastPages` For remediation the label `LastPages` (with “s” at its end) is introduced. Please then refer to this label by `\lastpageref{LastPages}` instead of `LastPage` or `VeryLastPage`.

`pagesLTS.arabic`  
`pagesLTS.roman`  
`pagesLTS.Roman`  
`pagesLTS.alph`  
`pagesLTS.Alph`  
`pagesLTS.fnsymbol`

Additionally, at the last page of each page numbering scheme a label `pagesLTS.<numbering scheme>` is placed, where `<numbering scheme>` is e.g. arabic, roman, Roman, alph, Alph,....  
For the `fnsymbol` page numbering scheme `\lastpageref{pagesLTS.fnsymbol}` is needed instead of `\pageref{pagesLTS.fnsymbol}`. You can and should use `\lastpageref{...}` also for the other page numbering schemes.

While at the time of the last revision of the `pageslts` package no other page numbering schemes were known to the maintainer, this package in principle works with every scheme which is recognized by the original `\pagenumbering` command. But the `hyperref` package only then works with crazy page names, if the references to those pages are given in a certain way, thus the combination of a new page numbering scheme, the `hyperref` and the `pageslts` package might not work. – The `pageslts` package by itself also works with schemes, which the original `\pagenumbering{...}` does not recognize, but because the original `\pagenumbering{...}` is called by the `pageslts` package, this might cause an error, see subsection 3.6! (And if the number format is unknown to L<sup>A</sup>T<sub>E</sub>X, the pages will have no number, and therefore cannot be referenced. You might be able to help yourself by using the `hyperref` package and manually placing `\hypertargets` and `\hrefs`.)

### 2.3.4 If the same `\pagenumbering{...}` scheme is used more than once

Everything from the preceding subsubsections applies and additionally the following:

`pagecontinue` If the same page numbering scheme is used twice (or even more often) in one document (e.g. in the frontmatter Roman: I–V, in the mainmatter arabic: 1–20, and in the backmatter again Roman: VI–X), the second time it is used, the page numbering is either continued (option `pagecontinue` or `pagecontinue=true` or no option `pagecontinue`; the default) or reset to one (option `pagecontinue=false`). It is even possible to use a page numbering scheme more than twice.

`agesLTS. page numbering  
scheme . number` If you want to refer to the last page of the first, second,... use of a page numbering scheme, page V in the example above, you can refer to `pagesLTS.<page numbering scheme>.<number>`, e.g. `\lastpageref{pagesLTS.Roman.1}`, where `<number>` is the occurrence of the page numbering scheme.

If you want to refer to the first page of a page numbering scheme, just place a label there, e.g.

```
\pagenumbering{Roman}  
\section{Section title}\label{RomanSection}
```

(You know where you use `\pagenumbering{...}` and this is the `pageslts` package, not the `firstpage` one).

When you want to give the number of pages of each “sector” of the page numbering scheme, you can use

```
\lastpages{<page numbering scheme>}{<number>},
```

where `<page numbering scheme>` is e.g. Roman, arabic,... and `<number>` the “sector” number, e.g. `\lastpages{Roman}{2}`.

(Internally, the counter has the format `pagesLTS.<page numbering scheme>.<number>.local.cnt.`)

If you used the page numbering scheme Roman for three times, you could say

```
Last Roman page (pagesLTS.Roman): \lastpageref{pagesLTS.Roman}\\\  
There are \lastpageref{pagesLTS.Roman.local}^ pages with Roman numbers:\\\  
\lastpages{Roman}{1}^ pages in the first Roman sector  
(\pageref{Roman} -- \lastpageref{pagesLTS.Roman.1}), \\\  
\lastpages{Roman}{2}^ pages in the second Roman sector  
(\pageref{Roman2} -- \lastpageref{pagesLTS.Roman.2}), and \\\  
\lastpages{Roman}{3}^ pages in the third Roman sector  
(\pageref{Roman3} -- \lastpageref{pagesLTS.Roman.3}). \\
```

to get

Last Roman page (pagesLTS.Roman): VIII

There are 8 pages with Roman numbers:

3 pages in the first Roman sector (I – III),

4 pages in the second Roman sector (IV – VII), and

3 pages in the third Roman sector (VIII – X).

(see e.g. the compiled `pageslts-example` file).

If you want to continue one page numbering scheme, but later on (third use of it, or for another page numbering scheme) want to reset the page number, just say `\setcounter{page}{1}` there.

In your document the code

```
\makeatletter
\renewcommand{\@evenfoot}{%
  \normalsize\slshape DRAFT \today\hfil \upshape page \thepage{} (\theCurrentPage) of \ %
  \lastpageref{pagesLTS.Roman} + \lastpageref{pagesLTS.arabic}\ = \lastpageref{LastPages} pages%
}
\renewcommand{\@oddfoot}{\@evenfoot}
\makeatother
```

creates footers like

“DRAFT January 19, 2014      page V (5) of VII + 35 = 42 pages”

or

“DRAFT January 19, 2014      page 10 (17) of VII + 35 = 42 pages”

in the compiled document (cf. the `pageslts-example` file).

Code like

```
This book has \lastpageref{pagesLTS.Roman}+\lastpageref{pagesLTS.arabic} pages %
(\lastpageref{LastPages} pages in total).
```

produces output like

This book has X+85 pages (95 pages in total).

(when using the `hyperref` package, the references are even hyperlinked).

If `\addtocounter{page}{...}` or `\setcounter{page}{...}` have been used, the local version of `currentPage` can be used, `\theCurrentPageLocal`, see subsection [2.2](#).

## 2.4 `papermas(s)` package

There is a kind of an add-on to this package, the `papermas` package, which can be used to compute the number of sheets of paper needed to print a document (you can print more than one page of a document on one sheet of paper) as well as the approximate mass of the printout. Please see the [7.1](#) subsection.

## 3 A few warnings

### 3.1 Hyperref and repeated page numbers

When two (or more) different page numbering schemes are used, or the page number is reset, or for any other reason there are two pages with the same number (maybe in different format, e.g. 1 and I), and `hyperref` has not been configured right, this can cause problems. Use `hyperref` with `plainpages=false` and `pdffpagelabels=true`, and everything should be fine.

More details can be found at <http://www.tex.ac.uk/cgi-bin/texfaq2html?label=pdffpagelabels>.

### 3.2 \AtEndDocument

The output of a  $\text{\LaTeX} 2\epsilon$  run is not independent of the order in which packages are loaded. It is often the case that the same formats for which one must put tables and figure at the end, are the ones in which endnotes are also required. If one wants to use `\AtEndDocument` here as well (as done for `\lastpageref{LastPage}`), then it is easy to get to three separate uses of `\AtEndDocument` (assuming one uses this for the endnotes as well). Clearly it is not safe for any package writer or user to assume that no material will follow what they put into `\AtEndDocument`. Therefore a message, which begins with AED, is included in every usage of `\AtEndDocument`, and it is tried to minimize any side effects the usage may have.

As now HEIKO OBERDIEK's `atveryend` package is used, the references `\lastpageref{VeryLastPage}` and `\lastpageref{LastPages}` should work all right. About how to get the `atveryend` package, please see subsection 7.1.

### 3.3 Interaction with very old versions of the `endfloat` package

The very old version 2.0 (and earlier) of the `endfloat` package actually redefined the `\enddocument` command, and so interfered drastically with the  $\text{\LaTeX} 2\epsilon$  commands which make use of `\AtEndDocument`. Newer versions of `endfloat` exist (at the time of writing this documentation: v2.5d as of 2011/12/25) in modern documentation form, which should be available from the same source where you received this file, see subsection 7.1.

A note is placed in the style file at the `\RequirePackage` section, and later it is even checked whether a (very) old `endfloat` package is in use. If it is, a warning or even an error message is given, depending on `endfloat` version. This assumes, that the old versions of `endfloat` at least gave a version date, of course.

If you want your `LastPage` to label the last page of these end floats, you need to load `pageslts` after loading `endfloat`, or to use `VeryLastPage` instead. If, on the other hand, you want `LastPage` to refer to the (not so) last page, exclusive of the floats at the end, then load in the reverse order. Independent from the order of `pageslts` and `endfloat`, you will still need the modified<sup>4</sup> version of `endfloat`.

Using the `LastPages` (*s!*) label should get you to the last page in all cases: `\lastpageref{LastPages}`.

Other  $\text{\LaTeX} 209$  (!) packages also seem to like to redefine `\enddocument`. In addition to the old `endfloat`, `harvard` comes to mind. All of these will need to be modified swiftly. **If possible, update to  $\text{\LaTeX} 2\epsilon$ !**

---

<sup>4</sup>New versions are available for over 15 years now, so it might be time to update, if you did not do it already.

### 3.4 showkeys package

When the `showkeys` package has been loaded in `draft` mode, in the margin for each label a box is displayed with the name of the label. `showkeys` accomplishes this by redefining `\label`, but `pageslts` does not use `\label`, but writes directly to the `\jobname.aux`-file, and this is generally done after the according page has shipped out, therefore no box can be placed on the preceding page. At least `pageslts` gives a warning, that `showkeys` cannot present the respective label.

### 3.5 lastpage package

This package first started as a revision of the `lastpage` package of JEFFREY P. GOLDBERG (jeffrey+news at goldmark dot org), but it became obvious that a replacement was needed to accomplish what this package does. For backward compatibility, a label named `LastPage` is provided. Thus `\usepackage{lastpage}` can be replaced by

```
\usepackage[pagecontinue=false,%  
alphMult=0,AlphMulti=0,fnsymbolmult=false,romanMult=false,RomanMulti=false]{pageslts},  
if the behaviour of the lastpage package should be simulated. Using old (!) versions of the lastpage before the pageslts before the hyperref [2012/11/06 v6.83m] package results in multiply definitions of the LastPage label. While the pageslts package cancels the command \lastpage@putlabel from the old lastpage package (because it does this itself, and better), hyperref redefines \lastpage@putlabel and thereby reintroduces it again (hyperref should probably check for the version of the lastpage package and/or whether the pageslts package was also loaded.)
```

### 3.6 Using an unknown page numbering scheme

I do not know whether L<sup>A</sup>T<sub>E</sub>X 2<sub>E</sub> can handle another page numbering scheme (e. g. Hebraic), but if you want to use it, this should be no problem for the `pageslts` package. But the original `\pagenumbering{...}` as well as the `hyperref` package (if used) might want to vote against it, especially when used together with the `pageslts` package. Especially especially (*sic!*) if the last page uses this new page numbering scheme, you should check everything double (at least).

(And if the number format is unknown to L<sup>A</sup>T<sub>E</sub>X, the pages will have no number, and therefore cannot be referenced. You might be able to help yourself by using the `hyperref` package and manually placing `\hypertargets` and `\hrefs`.)

### 3.7 Page counter overflow

Without the use of the `alphalph` package, the “ranges of supported counter values are more or less restricted. Only `\arabic` can be used with any counter value T<sub>E</sub>X supports.

Presentation command	Supported domain	Ignored values	Error message ‘Counter too large’
<code>\arabic</code>	<code>-MAX..MAX</code>		
<code>\roman, \Roman</code>	<code>1..MAX</code>	<code>-MAX..0</code>	
<code>\alph, \Alph</code>	<code>1..26</code>	<code>0</code>	<code>-MAX..-1, 27..MAX</code>
<code>\fnsymbol</code>	<code>1..9</code>	<code>0</code>	<code>-MAX..-1, 10..MAX</code>

`MAX = 2147483647`

” (HEIKO OBERDIEK: The `alphalph` package, 2010/04/18, v2.3, first table, p. 2).

Please see subsubsections 2.1.2 and 2.1.3 for instructions how to overcome these limitations.

### 3.8 Using the `fnsymbol` page numbering scheme

Using the `fnsymbol` page numbering scheme can result in problems – big ones!

**When using this page numbering scheme, it is very important to use `\lastpageref{...}` instead of `\pageref{...}` for any link to any label provided by the `pageslts` package.**

While the `pageslts` package tries really very hard to circumvent any problem, other packages might screw up – and quite totally for that. So, you have been warned!

- There can be a counter overflow, see preceding subsection [3.7](#).
- Adobe Reader XI (11.0.1) does not show the correct page names for all pages with `fnsymbol` page numbering scheme:

page number	page name	shown by the Reader	
		without <code>alphalph</code>	with <code>alphalph &amp; pageslts</code>
-2	LaTeX Error	–	–
-1	LaTeX Error	–*	–*
0	(ignored by L <sup>A</sup> T <sub>E</sub> X)	0	0
1	*	*	*
2	†		
3	‡		
4	§		
5	¶		
6		"026B30D	**
7	**	**	
8	††		
9	‡‡		
10	LaTeX Error		
11	LaTeX Error		
12	LaTeX Error		* * *

and so on, while at least the (... of ...) part of the page number is displayed correctly (see page 4, tip about logical page numbers). When the `alphalph` package and the `pageslts` package with `fnsymbolmult` option are used, page names like –\*, 0, \*, \*\* are also presented correctly by the Reader. (Adobe Reader X even got the other pages right.)

## 4 Alternatives

There are similar packages, which do (or do not) similar things. As I neither know what exactly you want to accomplish when using this package (e.g. page number vs. page name, hyperlinks or not), nor what resources you have (e.g.  $\varepsilon$ - $\text{\TeX}$ ), here is a list of some possible alternatives:

### LastPage

- The `LastPage` package also provides the `LastPage` label (but not `VeryLastPage` or `LastPages`). If you only want this and have a quite limited amount of  $\text{\TeX}$  resources, you might want to use that package instead.
- If  $\text{\LaTeX}2.09$  is still used, and if you are unable to switch to  $\text{\LaTeX}2\varepsilon$ , the  $\text{\LaTeX}2.09$  compatible `lastpage209.sty` can be used (which is also contained in the recent `LastPage` package).

### totpages

- The `totpages` package provides a `totpages` label similar to `LastPages`, but `\AtEndDocument` instead of `\AfterLastShipout`. Therefore you should stay with `pageslts`. The `totpages` package additionally computes the number of paper sheets needed to (double) print the document (with one, two, three,... pages on one sheet of paper). This can also be accomplished with the `papermas` package.

### totcount

- The `totcount` package provides the last value of a counter, thus also the value of the `page` counter. You do not get a hyperlink to the last page, only the numerical value of the last page name is given (i.e. `X+72` pages gives 72 instead of 82 as total number of pages), and the number of pages can be changed e.g. by `\addtocounter`.

### nofm

- “There is a package `nofm.sty` available, but some versions of it are defective, and most don’t work with `fancyhdr` because they take over the complete page layout.” (PIET VAN OOSTRUM: Page layout in  $\text{\LaTeX}$ , March 2, 2004, section 16; `fancyhdr.pdf`) `nofm` as of 1991/02/25 (without version number), available at <ftp://tug.ctan.org/pub/tex-archive/obsolete/macros/latex209/contrib/misc/nofm.sty>, does not work with e.g. `hyperref`, redefines `\enddocument` as well as `\@oddhead`, `\@evenhead`, `\@oddfoot`, and `\@evenfoot`. If you know the ([CTAN:](#)) location of a **working** (!) version, please send me an e-mail, thanks!

### count1to

- You may want to have a look at the `count1to` package.

### zref

- The `zref` package of HEIKO OBERDIEK requires  $\varepsilon$ - $\text{\TeX}$ . `pageslts` does not require  $\varepsilon$ - $\text{\TeX}$ , but if you already have  $\varepsilon$ - $\text{\TeX}$ , you may have a look at the extensive `zref` package, whether it suits your needs better (or additionally or whatsoever).

(You programmed or found another alternative, which is available at [CTAN:?](#)

OK, send an e-mail to me with the name, location at [CTAN:,](#) and a short notice, and I will probably include it in the list above.)

About how to get those packages, please see subsection [7.1](#).

## 5 Example

```
1 /*example
2 \documentclass[british]{article}

51 \section*{Example for pageslts}
52 \addcontentsline{toc}{section}{Example for pageslts}
53 \markboth{Example for pageslts}{Example for pageslts}
54
55 This example demonstrates the most common uses of package\\
56 \textsf{pageslts}, v1.2c as of 2014/01/19 (HMM).\\
57 The used options were \texttt{pagecontinue=true},\\
58 \texttt{alphMult=ab}, \texttt{AlphMulti=AB}, \texttt{linebreak}\\
59 \texttt{fnSymbolMult=true},\\
60 \texttt{romanMult=true}, and \texttt{RomanMulti=true}\\
61 (the default ones).\\
62 For more details please see the documentation!\\
63
64 \label{keys} To hide the \pageref{keys}{\quad} use option
65 \texttt{final} instead of \texttt{draft} with the \textsf{showkeys}
66 package (or remove the package call from the preamble of
67 this document).\\
68
69 \textbf{Hyperlinks or not:} If the \textsf{hyperref} package is loaded,
70 the references are also hyperlinked:\\
71 \smallskip
72 Page \thepage\ (\theCurrentPage; local: \theCurrentPageLocal) of %
73 \lastpageref{pagesLTS.roman}(\lastpageref{pagesLTS.roman.local}) + %
74 \lastpageref{pagesLTS.Roman}(\lastpageref{pagesLTS.Roman.local}) + %
75 \lastpageref{pagesLTS.arabic}(\lastpageref{pagesLTS.arabic.local}) + %
76 \lastpageref{pagesLTS.fnSymbol}(\lastpageref{pagesLTS.fnSymbol.local}) + %
77 \lastpageref{pagesLTS.alph}(\lastpageref{pagesLTS.alph.local}) + %
78 \lastpageref{pagesLTS.Alph}(\lastpageref{pagesLTS.Alph.local}) = %
79 \lastpageref{LastPages} pages.\\
80 If the \textsf{hyperref} package is loaded, but the hyperlinks of the
81 references shall be suppressed, \verb|\pageref*{...}|\\
82 and \verb|\lastpageref*{...}| can be used:\\
83 Page \thepage\ (\theCurrentPage; local: \theCurrentPageLocal) of %
84 \lastpageref*{pagesLTS.roman}(\lastpageref*{pagesLTS.roman.local}) + %
85 \lastpageref*{pagesLTS.Roman}(\lastpageref*{pagesLTS.Roman.local}) + %
86 \lastpageref*{pagesLTS.arabic}(\lastpageref*{pagesLTS.arabic.local}) + %
87 \lastpageref*{pagesLTS.fnSymbol}(\lastpageref*{pagesLTS.fnSymbol.local}) + %
88 \lastpageref*{pagesLTS.alph}(\lastpageref*{pagesLTS.alph.local}) + %
89 \lastpageref*{pagesLTS.Alph}(\lastpageref*{pagesLTS.Alph.local}) = %
90 \lastpageref*{LastPages} pages.\\
91
92

```

```

93 \textbf{Trademarks} appear throughout this example without any
94 trademark symbol; they are the property of their respective
95 trademark owner. There is no intention of infringement; the
96 usage is to the benefit of the trademark owner.\\
97
98 \textbf{Tip}: Use \textit{logical page numbers} for
99 the display of the pdf!\\
100 (In Adobe Reader XI (11.0.6): \underline{E}dit $>$
101 Prefere\underline{n}ces (Ctrl+k) $>$ Page Display $>$\\
102 Page Content and Information $>$ Use logical page
103 \nolinebreak{\underline{n}umbers.})\\
104
105 You want negative page numbers? Not only arabic, but even roman,
106 Roman, alph, Alph or fnsymbol ones? No problem, e.\,g. just give a\\
107 \verb|\addtocounter{page}{|-}\textit{some number}\verb|}| in the
108 source code of this example file (or uncomment the prepared line)!)
109
110 \bigskip
111
112 Save per page about $200\unit{ml}$ water, $2\unit{g}$ CO$_2$\\
113 and $2\unit{g}$ wood:\\
114 Therefore please print only if this is really necessary.
115
116 \pagebreak
117
118 \tableofcontents
119
120 \newpage
121
122 \pagenumbering{roman}
123 %% in case the page numbering is changed before,
124 %% otherwise pagesLTS.current.local.roman on this page
125 %% would be undefined
126
127 \section{roman}
128
129 \noindent (\texttt{roman} page numbering was started before,
130 because the page numbering scheme was needed to start at
131 the first page, of course.)\\
132
133 \noindent First page (\verb|\lastpageref{pagesLTS.0}|):
134 \lastpageref{pagesLTS.0}\\
135
136 \noindent The page (\verb|\thepage|): \thepage \\
137
138 \noindent Current page (\verb|\theCurrentPage|),
139 i.\,e. counted continuously from the first page): \theCurrentPage \\

```

```

140 You can get this also in other formats:
141 \roman{CurrentPage}, \Roman{CurrentPage}, \arabic{CurrentPage},
142 \fnsymbol{CurrentPage}, \alph{CurrentPage}, \Alpha{CurrentPage}.
143
144 \noindent currentPageLocal (\verb|\thecurrentPageLocal|),
145 i.e. counted continuously from the first page of the
146 current page numbering scheme): \thecurrentPageLocal \\
147 You can get also this in other formats, too:
148 \roman{pagesLTS.current.local.roman}, \Roman{pagesLTS.current.local.roman},
149 \arabic{pagesLTS.current.local.roman}, \fnsymbol{pagesLTS.current.local.roman},
150 \alph{pagesLTS.current.local.roman}, \Alpha{pagesLTS.current.local.roman},
151 but probably it only makes sense if page numbering scheme and format are
152 the same, e.g.\\
153 \verb|\Roman{pagesLTS.current.local.Roman}|\\
154 or \verb|\Alpha{pagesLTS.current.local.Alpha}|. \verb|\arabic{...}| could
155 make sense even if combined with another page numbering scheme.
156 And this is exactly what \verb|\thecurrentPageLocal| does:\\
157 \nolinebreak{\verb|\def|\thecurrentPageLocal{\arabic{pagesLTS.current.local.\pagesLTS@pnc}}|.|}\\
158
159 \noindent Last roman page (pagesLTS.roman): \lastpageref{pagesLTS.roman}{\hskip4em }
160 (There are \lastpageref{pagesLTS.roman.local} pages with roman numbers.)\\
161
162 \noindent Last Roman page (pagesLTS.Roman): \lastpageref{pagesLTS.Roman}{\hskip3em }
163 (There are \lastpageref{pagesLTS.Roman.local}~pages with Roman numbers:\\
164 \lastpages{Roman}{1}~pages in the first Roman sector
165 (\pageref{Roman}{\hskip3em }-\lastpageref{pagesLTS.Roman.1}{\hskip3em }),\\
166 \lastpages{Roman}{2}~pages in the second Roman sector
167 (\pageref{Roman2}{\hskip3em }-\lastpageref{pagesLTS.Roman.2}{\hskip3em }), and\\
168 \lastpages{Roman}{3}~pages in the third Roman sector
169 (\pageref{Roman3}{\hskip3em }-\lastpageref{pagesLTS.Roman.3}{\hskip3em }).\\
170
171 When the option \texttt{pagecontinue=false} is used with the
172 \textsf{pageslts} package, the \verb|\lastpageref{pagesLTS.Roman}| will
173 point to the same page as before, but this will have a lower number.\\
174 The \verb|\lastpageref{pagesLTS.Roman.local}| will not change,
175 because the number of pages does not change (only the page numbers).\\
176
177 \noindent Last arabic page (pagesLTS.arabic): \lastpageref{pagesLTS.arabic}{\hskip5em }
178 (There are only \lastpageref{pagesLTS.arabic.local} pages with arabic numbers,
179 because an \verb|\addtocounter{page}{|\pagesLTSexampleArabic\verb|}| was used.)\\
180
181 \noindent Last fnsymbol page (pagesLTS.fnsymbol): \lastpageref{pagesLTS.fnsymbol} \\
182 (\verb|\lastpageref{pagesLTS.fnsymbol}| -- never \verb|\pageref{pagesLTS.fnsymbol}|!)\\
183 (There are \lastpageref{pagesLTS.fnsymbol.local} pages with fnsymbol numbers.)\\
184
185 \noindent Last alph page (pagesLTS.alph): \lastpageref{pagesLTS.alph}{\hskip4em }
186 (There are only \lastpageref{pagesLTS.alph.local} pages with alph numbers,

```

```

187 because an \verb|\addtocounter{page}{|\pagesLTSexamplealph\verb|}| was used.)\\
188
189 \noindent Last Alpha page (pagesLTS.Alph): \lastpageref{pagesLTS.Alph}{\hskip4em }
190 (There are \lastpageref{pagesLTS.Alph.local} pages with Alpha numbers.)\\
191
192 \noindent Last page's \textit{name} (LastPage): \lastpageref{LastPage}\\
193
194 \noindent Very last page's \textit{name} (VeryLastPage): \lastpageref{VeryLastPage}\\
195 (\texttt{lastpage} and \texttt{VeryLastPage} are identical, unless
196 a package with output \linebreak
197 \verb|\AtEndDocument| after the \textsf{pageslts} package was added.)\\
198
199 \noindent Last page's \textit{number} (LastPages): \lastpageref{LastPages}{\hskip3em }
200 (=total number of pages)\\

```

```

422
423 \section{fnsymbol}
424
425 Adobe Reader XI (11.0.1) does not show the correct page names
426 for all pages with \texttt{fnsymbol} page numbering scheme:
427
428 \begin{center}
429 \begin{tabular}{c|c|c|c}
430 page & page & \multicolumn{2}{c|}{shown by the Reader} \\
431 number & name & without & \multicolumn{1}{c|}{with} \\
432 & & \multicolumn{2}{c|}{\textsf{alphalph}} & \textsf{pageslts} \\ \hline
433 $-2$ & \texttt{LaTeX Error} & & \ensuremath{-} & \\
434 $-1$ & \texttt{LaTeX Error} & & \ensuremath{- *} & \\
435 $0$ & (ignored by \LaTeX) & & 0 & \\
436 $1$ & \ensuremath{*} & & \ensuremath{*} & \\
437 $2$ & \ensuremath{\dagger} & & \& & \\
438 $3$ & \ensuremath{\ddagger} & & \& & \\
439 $4$ & \mathsection & & \& & \\
440 $5$ & \mathparagraph & & \& & \\
441 $6$ & \ensuremath{\{\delimter "026B30D\} \& "026B30D\} \& \ensuremath{\{**}} & \\
442 $7$ & \ensuremath{\{**}} & & \& \& & \\
443 $8$ & \ensuremath{\{\dagger \dagger\}} & & \& & \\
444 $9$ & \ensuremath{\{\ddagger \ddagger\}} & & \& & \\
445 $10$ & \texttt{LaTeX Error} & & \& & \\
446 $11$ & \texttt{LaTeX Error} & & \& \ensuremath{\{***}} & \\
447 $12$ & \texttt{LaTeX Error} & & \& & \\
448 \end{tabular}
449 \end{center}
450
451 \noindent and so on, while at least the (\ldots\ of \ldots ) part
452 of the page number is displayed correctly.\\
453
454 \bigskip
455
456 Without option \texttt{fnsymbolmult=true} of the \textsf{pageslts} package
457 (and the help of \textsc{Heiko Oberdiek}'s \textsf{alphalph} package),
458 after page-9 (\texttt{textquotedblleft} \ensuremath{\{\ddagger \ddagger\}} \texttt{textquotedblright} )
459 (and also for negative page numbers) there would just appear a
460 \begin{quote}
461 \begin{verbatim}
462 LaTeX Error: Counter too large
463 See the LaTeX manual or LaTeX Companion for explanation.
464 You've lost some text. Try typing <return> to proceed.
465 If that doesn't work, type X <return> to quit.
466 \end{verbatim}
467 \end{quote}
468 Now the page numbers after 5 (\ensuremath{\{\mathparagraph\}}) are

```

```

469 continued with the doubled \textquotedblleft number\textquotedblright{} of
470 the first, second, third,\ldots page (\ensuremath{***},
471 \ensuremath{\dagger\dagger}, \ensuremath{\ddagger\ddagger},
472 \ensuremath{\mathsection\mathsection},
473 \ensuremath{\mathparagraph\mathparagraph}),
474 and after the tenth page the \textquotedblleft number\textquotedblright{} is
475 tripled (\ensuremath{***}, \ensuremath{\dagger\dagger\dagger},\ldots).
476 Page zero is named 0 and negative pages just named like the positive ones
477 with addition of a minus sign~($-$).
478
479 \bigskip

535
536 \section{Roman - again!\label{Roman2}}
537
538 The page number would start with \textquotedblleft I\textquotedblright{} again --
539 but for the \textsf{pageslts} package (with option \texttt{pagecontinue=true},
540 or with option just \texttt{pagecontinue}, or even just
541 \nolinebreak\textbf{out} option \texttt{pagecontinue=false}).\\
542 This package remembered the (\arabic{pagesLTS.double.Roman}-1)\footnote{%
543 OK, here you have to compute this value for yourself, but %
544 subtracting one should be manageable for \TeX{}nicians.} pages already
545 done in Roman output, and therefore continues with page
546 \textquotedblleft \thepage \textquotedblright .\\
547 If you want to start with \textquotedblleft I\textquotedblright{} all
548 over again, you will have two pages with the same name,
549 but nevertheless you can do this by using option \texttt{pagecontinue=false}
550 or a \verb|\setcounter{page}{1}| here (not demonstrated in this example file).\\
551
552 \noindent First page (\verb|\lastpageref{pagesLTS.0}|):

644 \lastpages{Roman}{3}~pages in the third Roman sector
645 (\pageref{Roman3}{\hskip3em }-\lastpageref{pagesLTS.Roman.3}{\hskip3em }).\\
646
647 \noindent Last arabic page (pagesLTS.arabic): \lastpageref{pagesLTS.arabic}{\hskip5em }
648 (There are only \lastpageref{pagesLTS.arabic.local} pages with arabic numbers,
649 because an \verb|\addtocounter{page}{|\,|pagesLTSexampleArabic\verb|}| was used.)\\
650
651 \noindent Last fnsymbol page (pagesLTS.fnsymbol): \lastpageref{pagesLTS.fnsymbol} \\
652 (\verb|\lastpageref{pagesLTS.fnsymbol}| -- never \verb|\pageref{pagesLTS.fnsymbol}|!)\\
653 (There are \lastpageref{pagesLTS.fnsymbol.local} pages with fnsymbol numbers.)\\
654
655 \noindent Last alph page (pagesLTS.alph): \lastpageref{pagesLTS.alph}{\hskip4em }
656 (There are only \lastpageref{pagesLTS.alph.local} pages with alph numbers,

```

```

657 because an \verb|\addtocounter{page}{|\texttt{\backslash pagesLTSexamplealph\verb|}|} was used.)\\
658
659 \noindent Last Alpha page (pagesLTS.Alph): \lastpageref{pagesLTS.Alph}{\hspace{4em}}
660 (There are \lastpageref{pagesLTS.Alph.local} pages with Alpha numbers.)\\
661
662 \noindent Last page's \textit{name} (LastPage): \lastpageref{LastPage}\\
663
664 \noindent Very last page's \textit{name} (VeryLastPage): \lastpageref{VeryLastPage}\\
665 (\texttt{\textit{LastPage}} and \texttt{\textit{VeryLastPage}} are identical, unless
666 a package with output \linebreak
667 \verb|\AtEndDocument| after the \textsf{pageslts} package was added.)\\
668
669 \noindent Last page's \textit{number} (LastPages): \lastpageref{LastPages}{\hspace{3em}}
670 (=total number of pages)\\
671
672 \lipsum[1-4]
673
674 \newpage
675
676 Without option \texttt{\textit{alphMult}=ab} of the \textsf{pageslts} (and the help of
677 \textsc{Heiko Oberdiek's} \textsf{alphalph} package), after page
678 \texttt{\textit{textquotedblleft} z\textit{textquotedblright}} there would just appear a
679 \begin{quote}
680 \begin{verbatim}
681 LaTeX Error: Counter too large
682 See the LaTeX manual or LaTeX Companion for explanation.
683 You've lost some text. Try typing <return> to proceed.
684 If that doesn't work, type X <return> to quit.
685 \end{verbatim}
686 \end{quote}
687 Now the page numbers are continued aa, ab, ac,\ldots (aa, bb, cc,\ldots is
688 also possible, see the \textsf{pageslts} documentation).\\
689 To demonstrate this, we add a\\
690 \verb|\addtocounter{page}{|\texttt{\backslash pagesLTSexamplealph\verb|}|}|\\
691 in the source code here.

703 \section{Roman - third time!}\label{Roman3}

```

```

704
705 The page number would start with
706 \textquotedblleft I\textquotedblright{} again -- but
707 for the \textsf{pagesLTS} package (with option \texttt{pagecontinue=true}),
708 or with option just \texttt{pagecontinue}, or even just
709 \nolinebreak\textbf{out} option \texttt{pagecontinue=false}).
710 This package remembered the
711 (\arabic{pagesLTS.double.Roman}-1)\footnote{OK, here %
712 you have to compute this value for yourself, but %
713 subtracting one should be managable for \TeX nicians.} pages already
714 done in Roman output, and therefore continues with page
715 \textquotedblleft \thepage \textquotedblright .\\
716 If you want to start with \textquotedblleft I\textquotedblright{} all
717 over again, you will have (at least) two pages with the same name,
718 but nevertheless you can do this by using option
719 \texttt{pagecontinue=false} instead of \texttt{pagecontinue=true}
720 (not demonstrated here).\\

922 \end{document}
923 </example>

```

## 6 The implementation

(This and the source code of the example file are the reasons for printing the documentation in landscape format instead of portrait.)

We start off by checking that we are loading into LATEX 2 $\varepsilon$  and announcing the name and version of this package.

```
924 (*package)
925 \NeedsTeXFormat{LaTeX2e}[2011/06/27]
926 \ProvidesPackage{pageslts}[2014/01/19 v1.2c
927             Refers to special pages' numbers/names (HMM)]
928
```

## A short description of the `pageslts` package:

```

929 %% Allows for things like\\
930 %% |Page \thepage| (\theCurrentPage; local: \theCurrentPageLocal) of %
931 %% \lastpageref{pagesLTS.roman}(\lastpageref{pagesLTS.roman.local}) + %
932 %% \lastpageref{pagesLTS.Roman}(\lastpageref{pagesLTS.Roman.local}) + %
933 %% \lastpageref{pagesLTS.arabic}(\lastpageref{pagesLTS.arabic.local}) + %
934 %% \lastpageref{pagesLTS.fnsymbol}(\lastpageref{pagesLTS.fnsymbol.local}) + %
935 %% \lastpageref{pagesLTS.alph}(\lastpageref{pagesLTS.alph.local}) + %
936 %% \lastpageref{pagesLTS.Alph}(\lastpageref{pagesLTS.Alph.local}) = %
937 %% \lastpageref{LastPages} pages.|\\
938 %% to get\\
939 %% 'Page d (57; local: 4) of ii(2) + XX(20) + *(1) + 30(30) + e(5) + C(3) = 61 pages.'
940

```

The package is now named ‘`pageslts`’ but had been named ‘`pagesLTS`’ before. L<sup>A</sup>T<sub>E</sub>X does not load a package two times but it is case sensitive, i.e. `\usepackage{pageslts}` would load ‘`pageslts`’ and ‘`pagesLTS`’, resulting in possible problems. Therefore we check for a loaded ‘`pagesLTS`’ package (assuming `\if@filesw \relax \else \fi \ifx \pgesLTSloaded \relax \else \fi` is not `\pgesLTSloaded` and not defined to `\pgesLTSloaded` by another package). This check might work only for the second and following compilation runs.

```

957      }
958      \endinput
959  \fi
960 }% \relax
961 }
962
963 \gdef\pagesLTS@loaded{p@gesLTSlo@ded}
964

```

For its `\AfterLastShipout` (as well as its `\AtEndAfterFileList`) command we need the `atveryend` package by HEIKO OBERDIEK (see subsection 7.1):

```
965 \RequirePackage{atveryend}[2011/06/30]% v1.8
```

For its `\EveryShipout` command we need the `everyshi` package by MARTIN SCHRÖDER (see subsection 7.1):

```
966 \RequirePackage{everyshi}[2001/05/15]% v3.00
```

For its `\LetLtxMacro` command we need the `letltxmacro` package by HEIKO OBERDIEK (see subsection 7.1):

```
967 \RequirePackage{letltxmacro}[2010/09/02]% v1.4
```

For `\ltx@ifpackage@loaded` the `ltxcmds` package is needed, also by HEIKO OBERDIEK (see subsection 7.1):

```
968 \RequirePackage{ltxcmds}[2011/11/09]% v1.22
```

For the handling of the options we need the `kvoptions` package also by HEIKO OBERDIEK (see subsection 7.1):

```
969 \RequirePackage{kvoptions}[2011/06/30]% v3.11
```

The `undolab1` package of H.-MARTIN MÜNCH (i. e. myself), with code from ULRICH DIEZ, (see subsection 7.1) is needed to overwrite labels, when the same page numbering scheme is used twice (or even more often).

```
970 \RequirePackage{undolab1}[2012/01/01]% v1.0k
```

We use the `rerunfilecheck` package by HEIKO OBERDIEK to make sure that the user gets and sees the rerun warnings (if any).

```
971 \RequirePackage{rerunfilecheck}[2011/04/15]% v1.7
```

We must not forget to give the source of `Prelim@EveryShipout`:

```

972 %% pageslts package uses Prelim@EveryShipout code from the
973 %% prelim2e package [2009/05/29 v1.3] by Martin Schr\"{o}der, thanks!
974

```

About the `prelim2e` package by MARTIN SCHRÖDER see subsection 7.1.

A last information for the user(s):

```

975 %% pageslts may work with earlier versions of those packages,
976 %% but this was not tested. Please consider updating your packages
977 %% to the most recent version (if they are not already the most
978 %% recent version).
979

```

See subsection 7.1 about how to get them.

The very old version 2.0 (and earlier) of the `endfloat` package actually redefined the `\enddocument` command, and so interfered drastically with the L<sup>A</sup>T<sub>E</sub>X 2 <sub>$\varepsilon$</sub>  commands which make use of `\AtEndDocument`. Newer versions of `endfloat` exists (at the time of writing this documentation: v2.5d as of 2011/12/25) in modern documentation form, which are available from CTAN: (see subsection 7.1). A note is placed here, and later it is checked whether a (very) old `endfloat` package is in use. If it is, a warning or even an error message is given, depending on `endfloat` version. This assumes, that the old versions of `endfloat` at least gave a version date, of course.

```
980 %% The recent version of the endfloat package is v2.5d as of 2011/12/25.
981 %% The pageslts package is not fully compatible with version 2.0
982 %% (and earlier) of the endfloat package, because those versions
983 %% redefined the \enddocument command.
984
```

The options are introduced:

```
985 \SetupKeyvalOptions{family = pagesLTS,prefix = pagesLTS@}
986 \DeclareBoolOption[true]{pagecontinue}%
987 \DeclareStringOption[ab]{alphMult}
988 \DeclareStringOption[AB]{AlphMulti}
989 \DeclareBoolOption[true]{romanMult}
990 \DeclareBoolOption[true]{RomanMulti}
991 \DeclareBoolOption[true]{fnssymbolmult}
992
993 \ProcessKeyvalOptions*
```

994

For comparisons, zero, one, two and three are defined (`\z@`, `\cne` and so on do not work for this).

```
995 \def\pagesLTS@zero{0}
996 \def\pagesLTS@one{1}
997 \def\pagesLTS@two{2}
998 \def\pagesLTS@three{3}
999
```

The traditional behaviour is a reset of the page number to one, each time the page numbering scheme changes. The option `pagecontinue` changes this to a continuation with the number/name following the last page number/name of the same page numbering scheme. The user is informed accordingly.

```
1000 \ifpagesLTS@pagecontinue%
1001   \PackageInfo{pageslts}{Option pagecontinue enabled\MessageBreak%
1002     (maybe by default):\MessageBreak%
1003     The pageslts package will continue the page numbering,\MessageBreak%
1004     when the same page numbering scheme is used twice.\MessageBreak%
1005     If you do not want this, call pageslts with option\MessageBreak%
1006     pagecontinue=false (or use \string\setcounter{page}=1).\MessageBreak%
1007   }
1008 \else
```

```

1009 \PackageWarningNoLine{pageslts}{Option pagecontinue is false:\MessageBreak%
1010   The pageslts package was used, but the option\MessageBreak%
1011   pagecontinue was set to false.\MessageBreak%
1012   If you want the page numbers to be continued,\MessageBreak%
1013   when the same page numbering scheme is used twice,\MessageBreak%
1014   please call pageslts with option pagecontinue=true,\MessageBreak%
1015   otherwise the page number is reset to one each time\MessageBreak%
1016   the page numbering scheme is changed.\MessageBreak%
1017   For details please see the documentation%
1018 }
1019 \fi
1020

```

The page number printed in alph or in Alph page numbering scheme had to be  $> 0$  and  $< 27$ . Now the `alphalph` package allows to extend the numbering scheme (not only for pages). Because some users prefer aa, ab, ac, ad,... and some aa, bb, cc, dd,..., both schemes can be chosen via the options. The `fnsymbol` page numbering scheme was restricted to values  $> 0$  and  $< 10$ . The `alphalph` package allows to extend this page numbering scheme, too. Option `fnsymbolmult` can be chosen with the `pageslts` package. If no extension is wished (or another extension is wished and implemented manually), `pageslts` can be called with options set to 0 (zero) and false: `alphMult=0`, `AlphMulti=0`, `fnsymbolmult=false`.

1197     Press Ctrl+Z to exit.\MessageBreak
1198   }
1199 \fi
1200

```

\pagenumbering To keep the original meaning of \pagenumbering:

```

1201 \LetLtxMacro{\OrigPagenumbering}{\pagenumbering}
1202

```

Defining some new counters (and doing related things):

```

1203 \newcounter{CurrentPage}
1204 \setcounter{CurrentPage}{1}
1205 \def\theCurrentPageLocal{\arabic{pagesLTS.current.local.\pagesLTS@pnc}}

```

The counter pagesLTS.pagenr is for saving the total page number of the last page in the .aux file.

```

1206 \newcounter{pagesLTS.pagenr}

```

While generally \pagesLTS@ifcounter{pagesLTS.current.local.\pagesLTS@pnc} is used, for the beginning of the document pagesLTS.current.local.0 is predefined. (A \pagesLTS@ifcounter{pagesLTS.current.local.\pagesLTS@pnc} could be used for this, too, but we know that pagesLTS.current.local.0 was not defined, so we can just do the definition here.) And the first local page gets the number one.

```

1207 \newcounter{pagesLTS.current.local.0}
1208 \setcounter{pagesLTS.current.local.0}{1}

```

And the same again for pagesLTS.pnc.0.

```

1209 \newcounter{pagesLTS.pnc.0}
1210

```

\xroman When `\roman{...}` is used with a value  $< 1$ , L<sup>A</sup>T<sub>E</sub>X just ignores this (see subsection 3.7). Here we provide a command `\xroman{...}` (expanded roman), which gives the usual `\roman` numbers (i, ii, iii, iv,...) for positive values,  $-|\dots|$  (i.e. -i, -ii, -iii, -iv,...) for negative values, and 0 for all other values (which should be zero).

```
1211 \newcommand{\xroman}[1]{%
1212   \ifnum\value{#1}>0%
1213     \roman{#1}%
1214   \else%
1215     \ifnum\value{#1}<0%
1216       -\romannumeral\number-\arabic{#1}%
1217     \else%
1218       0%
1219     \fi%
1220   \fi%
1221 }
1222
```

`\arabic{#1}` gives the arabic number of argument #1, which is negative here (for example  $-7$ ), “-” puts another minus sign in front of it (for example  $--7$ ), `\number` removes all unnecessary preceding zeros, plus and minus signs (for example  $7$ ), `\romannumeral` turns it into a `\roman` number (for example  $vii$ ), and “-” puts the minus sign back in front of it (for example  $-vii$ ).

\XRoman \XRoman does the same for uppercase \Roman numbers. `-\uppercase{\romannumeral\#1}` cannot be used, because the result in the example is `-\uppercase{vii}` and not `-VII`.<sup>5</sup> Therefore we have a look at L<sup>A</sup>T<sub>E</sub>X's own \@Roman\FOOcounter,

```
\def\@Roman#1{\expandafter\@slowromancap\romannumeral #1@},
```

and use \@slowromancap, which is a fully expandable macro, to do the trick for this:

“

```
\def\@slowromancap#1{\ifx @#1% then terminate
\else
\if i#1I\else\if v#1V\else\if x#1X\else\if l#1L\else\if
c#1C\else\if d#1D\else \if m#1M\else#1\fi\fi\fi\fi\fi\fi
\expandafter\@slowromancap
\fi
}
```

” (1998/05/16 Version v1.1g LaTe<sub>X</sub> Kernel File m ltcnts.dtx 105 Counters and Lengths).

```
1223 \newcommand{\XRoman}[1]{%
1224   \ifnum\value{#1}>0%
1225     \Roman{#1}%
1226   \else%
1227     \ifnum\value{#1}<0%
1228       -\expandafter\@slowromancap\romannumeral\#1@%
1229     \else%
1230       0%
1231     \fi%
1232   \fi%
1233 }
1234
```

\XXRoman In older versions \XXRoman was used. For compatibility, it is forwarded to \XRoman and an error message is given.

```
1235 \newcommand{\XXRoman}[1]{\XRoman{#1}%
1236   \PackageError{pageslts}{Old command \string\XXRoman\space found}{Replaced by \string\XRoman.}%
1237 }
1238
```

\pagesLTS@ifcounter We provide a way to create counters like

- pagesLTS.pnc.<page numbering scheme>, e.g. pagesLTS.pnc.Roman,
- pagesLTS.double.<page numbering scheme>, e.g. pagesLTS.double.Roman,
- PageCurrentLocal.<page numbering scheme>, e.g. PageCurrentLocal.Roman,

for all page numbering schemes, even those not supported by the current original \pagenumbering (1994/05/19 v1.1a LaTe<sub>X</sub> Kernel File w ltpageno.dtx 52 Page Numbering), which is

---

<sup>5</sup>This does not matter for the print out, but for the display of the logical page numbers as well as the .aux file.

```

\countdef\c@page=0 \c@page=1
\def\cl@page{%
\def\pagenumbering#1{%
\global\c@page \c@page \gdef\thepage{\csname @#1\endcsname
\c@page}%

1239 \newcommand{\pagesLTS@ifcounter}[1]{%
1240   \ifundefined{c@#1}{\newcounter{#1}}{\relax}%
1241 }
1242

```

\lastpages We provide a command to give the number of pages in a sector of a split page numbering scheme (see page 9, `pagesLTS.<page numbering scheme>.<number>.local.cnt`):

```

1243 \newcommand{\lastpages}[2]{%
1244   \pagesLTS@ifcounter{pagesLTS.#1.#2.local.cnt}%
1245   \arabic{pagesLTS.#1.#2.local.cnt}%
1246 }
1247

```

\pagesLTS@writelabel At last defining the writing of a label:

```

1248 \newcommand{\pagesLTS@writelabel}[1]{%
1249   \addtocounter{page}{+1}%

```

\addtocounter{page}{+1} because \pagesLTS@putlabel includes an \addtocounter{page}{-1}, which is not necessary here.

Into the .aux file something like

```
\newlabel{pagesLTS.Roman}{\VIII}{page.VIII}
```

is written, thus \lastpageref{pagesLTS.Roman} prints VIII and links to page.VIII.

```

1250 \pagesLTS@putlabel{pagesLTS.#1}{\thepage}{1}
1251 \addtocounter{page}{-1}%
1252 \ifx\pagesLTS@pnc\pagesLTS@zero% \relax

```

i. e. if the current page numbering scheme is “0”, i. e. before the first \pagenumbering{...} command, do nothing,

```

1253 \else%
1254   \addtocounter{page}{+1}%
1255   \pagesLTS@putlabel{pagesLTS.#1.local}{\theCurrentPageLocal}{1}

```

otherwise write into the .aux file something like

```
\newlabel{pagesLTS.arabic.local}{5}{page.8},
```

thus \lastpageref{pagesLTS.arabic.local} prints 5 and links to page.8. Here (and in the example file) it is not “print 8 and link to page.8”, because \addtocounter{page}{3} has been used, thus the page with “number” (name) 8 is the **fifth** (= 8 – 3) page.

```

1256   \addtocounter{page}{-1}%
1257 \fi%
1258 }
1259

```

\erroralphaph extends the “numbers” of counters to zero and negative values for representations usually not supporting this: \alphaph, \AlphAlph, and \fnsymbolmult of the alphaph package.  
 \alph, \Alph, and \fnsymbol would not support “numbers” below one.  
 \arabic already supports negative numbers and zero.  
 \roman and \Roman support neither negative numbers nor zero, but are expanded in this package (\xroman and \XRoman), see page 44.

```

1260
1261 %% The following code is from Heiko Oberdiek [2010/04/18],          %%
1262 %% expanding his alphaph package as of 2010/04/18, v2.3. (Thanks!)    %%

1320             '#1'. \MessageBreak%
1321             If this is no typing mistake, it might work\MessageBreak%
1322             - or it might not work.\MessageBreak%
1323             \@ehc%
1324             }%
1325         \fi%
1326     \fi%

```

```

1327     \fi%
1328     \fi%
1329     \fi%
1330     \fi%
1331     \let\pagesLTS@tmpC\undefined%
1332   }
1333

```

\pagenumbersing Now for the **new** version of the \pagenumbersing command:

```
1334 \renewcommand{\pagenumbersing}[1]{%
```

If the current page numbering scheme, \pagesLTS@pnc, or the requested page numbering scheme, #1, is \pagesLTS@fns, i.e. fnsymbol, the counter pagesLTS.fnsymbol.local is needed. If it does not exists yet, it is created here.

```

1335 \edef\pagesLTS@tmpA{#1}%
1336 \ifx\pagesLTS@pnc\pagesLTS@fns%
1337   \pagesLTS@ifcounter{pagesLTS.fnsymbol.local}%
1338   \fi%
1339 \ifx\pagesLTS@tmpA\pagesLTS@fns%
1340   \pagesLTS@ifcounter{pagesLTS.fnsymbol.local}%
1341   \fi%

```

If the current page numbering scheme, \pagesLTS@pnc, and the requested page numbering scheme, #1, is the same one, nothing further is done, otherwise the real action begins.

```
1342 \ifx\pagesLTS@pnc\pagesLTS@tmpA% \relax
1343 \else%
```

The next code is executed, when we are at a page after the first one. This distinction is done for two reasons:

On the one hand, \pagenumbersing could be called *before* \begin{document} (where the current page should not be greater than one), and on the other hand we go one page back to aim all references to that page. Obviously at the first page there is no going backward.

```

1344 \ifnum \value{CurrentPage}>1%
1345   \addtocounter{page}{-1}%
1346   \addtocounter{pagesLTS.current.local.\pagesLTS@pnc}{-1}%

```

For the case that the page numbering scheme is or will be split, like e.g. the Roman one in the `pageslts-example.tex`, a counter like `pagesLTS.Roman.1.local.count` (or `pagesLTS.Roman.2.local.count`, `pagesLTS.Roman.3.local.count`,...) is introduced and set to the number of the local page.

```

1347 \newcounter{pagesLTS.\pagesLTS@pnc.\arabic{pagesLTS.pnc.\pagesLTS@pnc}.local.count}%
1348 \setcounter{pagesLTS.\pagesLTS@pnc.\arabic{pagesLTS.pnc.\pagesLTS@pnc}.local.count}{%
1349   \value{pagesLTS.current.local.\pagesLTS@pnc}}%
```

If the page numbering scheme is fnsymbol, and if it *was* used before, from said counter the number of pages of the preceding uses of the same page numbering scheme, `pagesLTS.\pagesLTS@pnc.done`, is subtracted (same as for the other schemes, see below). Instead of introducing a new counter (which can be problematic, when the number of available counters is limited), we borrow the `pagesLTS.pnc.0` counter, i.e. we save its value to `\pagesLTS@tmpa`, (ab)use the counter, and then set it back to its former value as saved in `\pagesLTS@tmpa`.

```

1350 \ifx\pagesLTS@pnc\pagesLTS@fns%
1351   \ifnum \value{pagesLTS.pnc.\pagesLTS@pnc}>1%
1352     \mathchardef\pagesLTS@tmpa=\arabic{pagesLTS.pnc.0}%
1353     \setcounter{pagesLTS.pnc.0}{\value{pagesLTS.pnc.\pagesLTS@pnc}}%
1354     \addtocounter{pagesLTS.pnc.0}{-1}%
1355     \addtocounter{pagesLTS.\pagesLTS@pnc.\arabic{pagesLTS.pnc.\pagesLTS@pnc}.local.count}{%
1356       -\value{pagesLTS.\pagesLTS@pnc.\arabic{pagesLTS.pnc.0}.local.count}}%
1357     \setcounter{pagesLTS.pnc.0}{\pagesLTS@tmpa}%
1358   \fi%

```

If the page numbering scheme is *not* fnsymbol, a numbered label is written:

```

1359 \else%
1360   \pagesLTS@writelnlabel{\pagesLTS@pnc.\arabic{pagesLTS.pnc.\pagesLTS@pnc}}%

```

If the page numbering scheme was *not* used before,

```

1361   \ifnum \value{pagesLTS.pnc.\pagesLTS@pnc}<2%

```

an unnumbered label is also written:

```

1362   \pagesLTS@writelnlabel{\pagesLTS@pnc}%

```

If the page numbering scheme *was* used before, from said counter the number of pages of the preceding uses of the same page numbering scheme, `pagesLTS.\pagesLTS@pnc.done`, is subtracted. Instead of introducing a new counter (which can be problematic, when the number of available counters is limited), we again borrow the `pagesLTS.pnc.0` counter (see above).

```

1363 \else%
1364   \mathchardef\pagesLTS@tmpa=\arabic{pagesLTS.pnc.0}%
1365   \setcounter{pagesLTS.pnc.0}{\value{pagesLTS.pnc.\pagesLTS@pnc}}%
1366   \addtocounter{pagesLTS.pnc.0}{-1}%
1367   \pagesLTS@ifcounter{pagesLTS.\pagesLTS@pnc.done}%
1368   \addtocounter{pagesLTS.\pagesLTS@pnc.done}{%
1369     -\value{pagesLTS.\pagesLTS@pnc.\arabic{pagesLTS.pnc.0}.local.count}}%
1370   \addtocounter{pagesLTS.\pagesLTS@pnc.\arabic{pagesLTS.pnc.\pagesLTS@pnc}.local.count}{%
1371     -\value{pagesLTS.\pagesLTS@pnc.done}}%
1372   \setcounter{pagesLTS.pnc.0}{\pagesLTS@tmpa}%
1373 \fi%

```

The values are written to the `.aux` file (if writing is allowed: `\if@filesw`), because they must be available at the beginning of the document:

```

1374 \if@filesw%
1375   \immediate\write\@auxout{\string
1376     \pagesLTS@ifcounter{pagesLTS.\pagesLTS@pnc.\arabic{pagesLTS.pnc.\pagesLTS@pnc}.local.cnt}}%
1377 \fi%
1378 \edef\pagesLTS@tmpB{\arabic{pagesLTS.\pagesLTS@pnc.\arabic{pagesLTS.pnc.\pagesLTS@pnc}.local.count}}%
1379 \if@filesw%
1380   \immediate\write\@auxout{\string
1381     \setcounter{pagesLTS.\pagesLTS@pnc.\arabic{pagesLTS.pnc.\pagesLTS@pnc}.local.cnt}{\pagesLTS@tmpB}}%
1382 \fi%
1383 \fi%

```

For further code for the case of `fnsymbol` please see below (`\lastpageref{text}`, page 53).  
The last page number is saved, in case the same page numbering scheme is continued later.

```
1384     \pagesLTS@ifcounter{pagesLTS.double.\pagesLTS@pnc}%
1385     \setcounter{pagesLTS.double.\pagesLTS@pnc}{\value{page}}%
```

We went back one page, so we must go forward again:

```
1386     \addtocounter{pagesLTS.current.local.\pagesLTS@pnc}{+1}%
1387     \addtocounter{page}{+1}%
```

The page numbering scheme `\pagesLTS@pnc` is now set to the new one, given by the user as argument with the `\pagenumbering{...}` command:

```
1388     \xdef\pagesLTS@pnc{\#1}%
```

The new page numbering scheme is now started for real:

```
1389     \OrigPagenumbering{\#1}%
```

If a page numbering scheme not known by the original `\pagenumbering{...}` command is used, an error will arise here - but maybe without error message.

If page numbering schem `\alph`, `\Alph`, or `\fnsymbol` is used, `pagesLTS` extends the page numbers according to the given options, using the `alphalph` package. `\arabic` does not need any expansion. `\roman` and `\Roman` at least receive a definition for zero.

```
1390     \expandPagenumbering{\#1}%
```

Counters like `pagesLTS.pnc.Roman` are introduced:

```
1391     \pagesLTS@ifcounter{pagesLTS.pnc.\pagesLTS@pnc}%
```

The saved number of times this page numbering scheme was used is increased by one:

```
1392     \addtocounter{pagesLTS.pnc.\pagesLTS@pnc}{1}%
```

Now defining the counter `pagesLTS.double.\pagesLTS@pnc`, if it did not exist already, adding 1, because this is the first page of it (or another one, if the scheme is continued):

```
1393     \pagesLTS@ifcounter{pagesLTS.double.\pagesLTS@pnc}%
1394     \addtocounter{pagesLTS.double.\pagesLTS@pnc}{1}%
```

The page number is continued, if the option `pagecontinue=false` is **not** set, otherwise it is reset to one. Note that neither the local nor the current counter are reset, as they contain the real *values* and not the *names* of the pages.

```
1395     \ifpagesLTS@pagecontinue%
1396         \setcounter{page}{\value{pagesLTS.double.\pagesLTS@pnc}}%
1397     \else%
1398         \setcounter{page}{1}%
1399     \fi%
```

If it does not exist already, the counter `pagesLTS.current.local.\pagesLTS@pnc` (e.g. `pagesLTS.current.local.Roman`) is created.

```
1400     \pagesLTS@ifcounter{pagesLTS.current.local.\pagesLTS@pnc}%
```

If `pagesLTS.double.\pagesLTS@pnc` of the current page numbering scheme is equal to one, this is the first page of this page numbering scheme. Then `pagesLTS.current.local.\pagesLTS@pnc` (which was zero) is set to one.

```
1401     \ifnum \value{pagesLTS.double.\pagesLTS@pnc}=1%
1402         \setcounter{pagesLTS.current.local.\pagesLTS@pnc}{1}%
1403     \fi%
```

Otherwise, i. e. if `\value{CurrentPage}` is not >1, i. e. before the first page has shipped out:

```
1404     \else%
1405     %% before the first page has shipped out
```

The current page numbering scheme is defined by the argument of `\pagenumbering{...}`, which the user gave:

```
1406     \xdef\pagesLTS@pnc{\#1}%
```

and the page numbering scheme set by the original page numbering command (1994/05/19 v1.1a LaTeX Kernel File w lt-pageno.dtx 52 Page Numbering), which resets the page number to one, but at the first page continuation does not make sense). Well, nearly the original page numbering command: `\OrigPagenumbering{\pagesLTS@pnc}` does not work, so we “expand” the `\OrigPagenumbering` command:

```
1407     \global\c@page \one\relax%
1408     \global\def\thepage{\csname \expandafter \endcsname \c@page}%
```

If a page numbering scheme is used, which is not known by L<sup>A</sup>T<sub>E</sub>X, an error might arise here – but maybe without error message.

If page numbering scheme `\alph`, `\Alph`, or `\fnsymbol` is used, `pageslts` extends the page numbers according to the given options, using the `alphalph` package. `\arabic` does not need any expansion. `\roman` and `\Roman` at least receive a definition for zero.

```
1409     \expandPagenumbering{\#1}
```

We are at the first page, so the page counters are set to one:

```
1410     \pagesLTS@ifcounter{pagesLTS.pnc.\pagesLTS@pnc}%
1411     \setcounter{pagesLTS.pnc.\pagesLTS@pnc}{1}%
1412     \pagesLTS@ifcounter{pagesLTS.double.\pagesLTS@pnc}%
1413     \setcounter{pagesLTS.double.\pagesLTS@pnc}{1}%
1414     \pagesLTS@ifcounter{pagesLTS.current.local.\pagesLTS@pnc}%
1415     \setcounter{pagesLTS.current.local.\pagesLTS@pnc}{1}%
1416     \fi%
```

Whether `\pagenumbering{...}` is called in the preamble, `\AtBeginDocument`, right after `\begin{document}`, or somewhere in the document, we want to remember *whether* it was called at all:

```
1417     \gdef\pagesLTS@called{1}%
1418     \fi%
```

We do not need the temporary definitions any more.

```
1419     \let\pagesLTS@tmpA\undefined%
1420     \let\pagesLTS@tmpB\undefined%
1421 }
1422
```

\lastpageref\* If hyperref is used, but (some) references to some last page shall not be hyperlinked, a command \lastpageref\* (analogous to \pageref\*) is needed. Therefore we define (analogous to \HyPsd@pageref from the hyperref package by HEIKO OBERDIEK)

1423 %% analogous to \HyPsd@pageref from the hyperref package by Heiko Oberdiek:  
1424 \def\lastpageref{#1}{\pagesLTS@@pageref{#1}\*}\END  
1425

Macro \pagesLTSpageref checks, whether a star is present (analogous to \HyPsd@@pageref again from the hyperref package of HEIKO OBERDIEK):

1426 \def\pagesLTS@@pageref{#1\*#2}\END{  
1427 \ifx\#2\% no star  
1428 \pagesLTS@@pageref{#1}%  
1429 \else% star  
1430 \expandafter\pagesLTS@@pagerefstar%  
1431 \fi%  
1432 }  
1433  
1434 \def\pagesLTS@@pageref{#1}{\lastpageref{text}{#1}}  
1435 \def\pagesLTS@@pagerefstar{#1}{\lastpageref{textstar}{#1}}  
1436

\lastpageref{text} When \lastpageref is used somewhere inside the `txt` (text), i.e. not at the last page, it is defined as \lastpageref{txt} (see above). When the page numbering scheme is `fnsymbol`, and the `hyperref` package has been loaded, a `hyperref` instead of a label is used for the reference to `pagesLTS.fnsymbol.local.\arabic{pagesLTS.fnsymbol.local}`. (And if the `pagesLTS.fnsymbol.local` counter did not exist yet, it is created here.)

1437 \newcommand{\lastpageref{text}}[1]{%  
1438 \def\pagesLTS@tmpA{#1}%  
1439 \def\pagesLTS@tmpB{pagesLTS.fnsymbol.local}%  
1440 \ifx\pagesLTS@tmpA\pagesLTS@tmpB%  
1441 \pagesLTS@ifcounter{pagesLTS.fnsymbol.local}%  
1442 \ltx@ifpackageloaded{hyperref}{%  
1443 \href{\#pagesLTS.fnsymbol.local.\arabic{pagesLTS.fnsymbol.local}}%  
1444 {\arabic{pagesLTS.fnsymbol.local}}%

When the page numbering scheme is `fnsymbol`, but the `hyperref` package has *not* been loaded, just the arabic number of the `pagesLTS.fnsymbol.local` counter is given (because there will be no hyperlink anyway).

1445 }{\arabic{pagesLTS.fnsymbol.local}}%

Otherwise just the common \pageref is applied:

1446 \else%  
1447 \pageref{#1}%  
1448 \fi%

We do not need the temporary definitions any more.

1449 \let\pagesLTS@tmpA\undefined%  
1450 \let\pagesLTS@tmpB\undefined%

```
1451 }
1452
```

\lastpageref{textstar} And the same for the starred version, where no hyperlink is generated:

```
1453 \newcommand{\lastpageref{textstar}}[1]{%
1454   \def\pagesLTS@tmpA{#1}%
1455   \def\pagesLTS@tmpB{\pagesLTS.fnsymbol.local}%
1456   \ifx\pagesLTS@tmpA\pagesLTS@tmpB%
1457     \pagesLTS@ifcounter{\pagesLTS.fnsymbol.local}%
1458     \arabic{\pagesLTS.fnsymbol.local}%
1459   \else%
```

There is no \pageref\* without hyperref.

```
1460   \ltx@ifpackageloaded{hyperref}{\pageref*{#1}}{\pageref{#1}}%
1461   \fi%
1462   \let\pagesLTS@tmpA\undefined%
1463   \let\pagesLTS@tmpB\undefined%
1464 }
```

```
1465
```

\lastpagerefend When the hyperref package is used and the page numbering scheme of the last page is fnsymbol, \lastpageref is defined as \lastpagerefend. Hyperrefs instead of labels are used for the reference to fnsymbol pages (including the last one).

Again it must be discriminated between unstarred form and starred form:

```
1466 \def\lastpagerefend#1{\pagesLTS@@pagerefend#1*\END}
1467
1468 \def\pagesLTS@@pagerefend#1#2\END{%
1469   \ifx\\#2\\% no star
1470     \pagesLTS@@pagerefend{#1}%
1471   \else% star
1472     \expandafter\pagesLTS@@pagerefendstar%
1473   \fi%
1474 }
1475
1476 \def\pagesLTS@@pagerefend#1{\l@stpagerefend{#1}}
1477 \def\pagesLTS@@pagerefendstar#1{\l@stpagerefendstar{#1}}
1478
```

\l@stpagerefend The unstarred form (i. e. with hyperlinks, if hyperref is loaded, otherwise without hyperlinks):

```
1479 \newcommand{\l@stpagerefend}[1]{%
1480   \def\pagesLTS@tmpA{#1}%
1481   \def\pagesLTS@tmpB{\pagesLTS.fnsymbol.local}%
1482   \ifx\pagesLTS@tmpA\pagesLTS@tmpB%
1483     \pagesLTS@ifcounter{\pagesLTS.fnsymbol.local}%
1484     \ltx@ifpackageloaded{hyperref}{%
1485       \href{\#pagesLTS.fnsymbol.local.\arabic{\pagesLTS.fnsymbol.local}}%
```

```

1486      {\arabic{pagesLTS.fnsymbol.local}}%
1487  }{\arabic{pagesLTS.fnsymbol.local}}%
1488 \else%
1489   \def\pagesLTS@tmpB{pagesLTS.fnsymbol}%
1490   \ifx\pagesLTS@tmpA\pagesLTS@tmpB%
1491     \ltx@ifpackageloaded{hyperref}{%
1492       \href{\#pagesLTS.fnsymbol.local.\arabic{pagesLTS.fnsymbol.local}}{%
1493         {\pagesLTS.lastpage}}%
1494       }{\pageref{pagesLTS.fnsymbol}}%
1495     \else%
1496       \def\pagesLTS@tmpB{LastPage}%
1497       \ifx\pagesLTS@tmpA\pagesLTS@tmpB%
1498         \ltx@ifpackageloaded{hyperref}{%
1499           \href{\#pagesLTS.fnsymbol.local.\pagesLTS@eso}{%
1500             {\pagesLTS.lastpage}}%
1501           }{\pageref{LastPage}}%
1502         \else%
1503           \def\pagesLTS@tmpB{VeryLastPage}%
1504           \ifx\pagesLTS@tmpA\pagesLTS@tmpB%
1505             \ltx@ifpackageloaded{hyperref}{%
1506               \href{\#pagesLTS.fnsymbol.local.\arabic{pagesLTS.fnsymbol.local}}{%
1507                 {\pagesLTS.lastpage}}%
1508               }{\pageref{VeryLastPage}}%
1509             \else%
1510               \def\pagesLTS@tmpB{LastPages}%
1511               \ifx\pagesLTS@tmpA\pagesLTS@tmpB%
1512                 \ltx@ifpackageloaded{hyperref}{%
1513                   \href{\#pagesLTS.fnsymbol.local.\arabic{pagesLTS.fnsymbol.local}}{%
1514                     {\arabic{pagesLTS.pagenr}}}}%
1515                   }{\pageref{LastPages}}%
1516                 \else%
1517                   \pageref{\#1}%
1518                 \fi%
1519               \fi%
1520             \fi%
1521           \fi%
1522         \fi%

```

We do not need the temporary definitions any more.

```

1523 \let\pagesLTS@tmpA\undefined%
1524 \let\pagesLTS@tmpB\undefined%
1525 }
1526

```

\l@stpagerefendstar And the starred form, without hyperlinks, even if `hyperref` is loaded, otherwise (i. e. without loaded `hyperref`) this command is not called:

```
1527 \newcommand{\l@stpagerefendstar}[1]{%
1528   \def\pagesLTS@tmpA{\#1}%
1529   \def\pagesLTS@tmpB{\pagesLTS.fnsymbol.local}%
1530   \ifx\pagesLTS@tmpA\pagesLTS@tmpB%
1531     \pagesLTS@ifcounter{\pagesLTS.fnsymbol.local}%
1532     \arabic{\pagesLTS.fnsymbol.local}%
1533   \else%
1534     \def\pagesLTS@tmpB{\pagesLTS.fnsymbol}%
1535     \ifx\pagesLTS@tmpA\pagesLTS@tmpB%
1536       \ltx@ifpackageloaded{hyperref}{\pageref*{\pagesLTS.fnsymbol}}{%
1537         \pageref{\pagesLTS.fnsymbol}}%
1538       \else%
1539         \def\pagesLTS@tmpB{LastPage}%
1540         \ifx\pagesLTS@tmpA\pagesLTS@tmpB%
1541           \ltx@ifpackageloaded{hyperref}{\pageref*{LastPage}}{\pageref{LastPage}}%
1542         \else%
1543           \def\pagesLTS@tmpB{VeryLastPage}%
1544           \ifx\pagesLTS@tmpA\pagesLTS@tmpB%
1545             \ltx@ifpackageloaded{hyperref}{\pageref*{VeryLastPage}}{%
1546               \pageref{VeryLastPage}}%
1547             \else%
1548               \def\pagesLTS@tmpB{LastPages}%
1549               \ifx\pagesLTS@tmpA\pagesLTS@tmpB%
1550                 \ltx@ifpackageloaded{hyperref}{\pageref*{LastPages}}{\pageref{LastPages}}%
1551                 \else%
1552                   \ltx@ifpackageloaded{hyperref}{\pageref*{\#1}}{\pageref{\#1}}%
1553                   \fi%
1554                   \fi%
1555                   \fi%
1556                   \fi%
1557                   \fi%
1558                   \let\pagesLTS@tmpA\undefined%
1559                   \let\pagesLTS@tmpB\undefined%
1560                 }%
1561               }%
1562 }
```

```

\overridelabel \overridelabel from the undolab package just \undonewl a label and places a new \label{#1}, but we need to place a
\pagesLTS@putlabel{#1}{#2}, therefore we need another command instead of (but somewhat similar to) \overridelabel:

1563 % somewhat analogous to \overridelabel from the undolab package:
1564 \newcommand\overridelTSlabel[2]{%
1565   \@bsphack
1566   \ifnum \value{pagesLTS.pnc.\pagesLTS@pnc}>1%
1567     \edef\pagesLTStampA{\#1}%
1568     \edef\pagesLTStampB{\pagesLTS.\pagesLTS@pnc.local}%
1569     \ifx\pagesLTStampA\pagesLTStampB%
1570       \immediate\write\auxout{\string\undonewl{\#1}}%
1571       \overriddenmessage s{\#1}%
1572     \fi%
1573   \fi%
1574   \pagesLTS@putlabel{\#1}{\#2}{0}%
1575 \@esphack%
1576 }
1577

```

LTS@Prelim@EveryShipout Because we cannot make references to pages with fnsymbol page “numbers” manually with hyperref, we use \phantomsections and refer to one of those. But because we do not know how many \phantomsections and \section\*s are introduced by the user (or other packages; cf. L<sup>A</sup>T<sub>E</sub>X bug 2298: knowing level of section\*, <http://www.latex-project.org/cgi-bin/ltxbugs2html?category=LaTeX&responsible=anyone&state=open&keyword=&pr=latex%2F2298&search=>), we cannot refer to the last one as we did with the pages.

```

1578 \newcommand{\@pagesLTS@Prelim@EveryShipout}{%

```

Therefore each page with fnsymbol page “number” receives a \phantomsection and a label, which includes a number increased by one for each page. This is done for pagesLTS.fnsymbol.local.\arabic{pagesLTS.fnsymbol.cont} as well as pagesLTS.fnsymbol, pagesLTS.\pagesLTS@pnc, and pagesLTS.\pagesLTS@pnc.local. In case an older label already existed, it is overwritten by an \overridelabel command.

```

1596     \ifx\pagesLTS@pnc\pagesLTS@fns%
1597         \pagesLTS@ifcounter{\pagesLTS.fnsymbol.cont}%

1652       \else%
1653         \PackageError{pageslts}{%
1654           Counter ‘page’ does not have a recognized value:\MessageBreak%
1655           ‘\the\value{page}’\MessageBreak%
1656           \@ehd \MessageBreak%
1657         }%
1658       \fi%
1659     \fi%
1660   \fi%
```

If the `CurrentPage` is equal to one, this is the first shipout.

```
1661 \ifnum \value{CurrentPage}=1% This is the first shipout!
```

We check whether some page numbering scheme was defined by `\pagenameumbering{...}` (as it should be!):

```
1662 \ifx\pagesLTS@called\pagesLTS@zero%
```

If it was not defined (i.e. `\pagesLTS@called` is zero), the user should be informed, that a `\pagenameumbering{...}` is missing behind `\begin{document}`. Of course, it is possible that some package did some pages of output with `\AtBeginDocument`. In that case, one `\pagenameumbering{...}` before `\begin{document}` and one `\pagenameumbering{...}` (with the same argument, of course!) behind `\begin{document}` could help somewhat. When `\PackageError` was used here, the error message was not written to the screen and the `.log`-file, but into the document. Therefore we just make a note to give the error message later (`\AtEndDocument`). At that time unfortunately most of the document has already been compiled (or did not compile due to this error), but I do not know how to change that.

```
1663 \global\def\pncmissing{1}%
```

We save the current value of the page,

```
1664     \mathchardef\pagesLTS@tmpD=\arabic{page}%
```

determine the current page numbering scheme,

```
1665 %% Code from Andres L\"{o}h, Universiteit Utrecht (NL)      %%
1666     \def\extract#1{\expandafter\extract@ #1\END}%
1667     \def\extract@#1\csname @#2\endcsname#3\END{#2}%
1668     \edef\pagesLTS@tmpQ{\extract{\thepage}}%
1669 %% End of code from Andres L\"{o}h                                %%
1670     \let\pagesLTS@tmpP\pagesLTS@tmpQ%
```

set the current page numbering scheme to 0 (because before the beginning of the document it should be 0),

```
1671     \def\pagesLTS@pnc{0}%
```

and then issue a `\pagenumbering` command with the determined page numbering scheme as argument:

```
1672     \pagenumbering{\pagesLTS@tmpP}%
```

This resets the page to one (if option `pagecontinue=false` was chosen), but because we do not start a new page numbering scheme here but manifest a page numbering scheme, which the user forgot to define, the page number should not have been reset to one. (This is the first page, but maybe the user wants it to have page number 2001?) Therefore we revert this here and set the page number to its value, which was saved before the `\pagenumbering` command.

```
1673     \setcounter{page}{\pagesLTS@tmpD}%
1674     \fi%
```

We are at the first page, so we put the label here.

```
1675     \pagesLTS@writelabel{0}%
1676     \fi%
```

If the current page numbering scheme `\pagesLTS@pnc` is `\pagesLTS@fns` (which is defined as `fnsymbol`), the label is set by `\@pagesLTS@Prelim@EveryShipout` (see just above), and `\pagesLTS@esov` is set to the (real) number (not the name) of this page numbering scheme, `\arabic{pagesLTS.fnsymbol.cont}`.

When no more pages with `fnsymbol` page “number” are shipped out, the value remains fixed and we have our reference to the last page of the `fnsymbol` page numbering range. (At least we will have that reference after some more work, see below).

```
1677     \ifx\pagesLTS@pnc\pagesLTS@fns%
1678     \@pagesLTS@Prelim@EveryShipout%
1679     \gdef\pagesLTS@esov{\arabic{pagesLTS.fnsymbol.cont}}%
```

When another page numbering scheme was reused (in the example file `Roman`), we also need to apply `\@pagesLTS@Prelim@EveryShipout`, because otherwise we would get multiply defined labels.

```
1680     \else%
1681     \ifnum \value{pagesLTS.pnc.\pagesLTS@pnc}>1%
1682     \@pagesLTS@Prelim@EveryShipout%
1683     \fi%
1684     \fi%
```

The `CurrentPage` as well as the `pagesLTS.current.local.\pagesLTS@pnc` are advanced by one (because one page was shipped out and the next is about to begin).

```
1685 \addtocounter{CurrentPage}{1}%
1686 \addtocounter{pagesLTS.current.local.\pagesLTS@pnc}{1}%
1687 }
1688
```

`\pagesLTS@putlabelhyper` Here the labels are set, if the `hyperref` package was loaded. Simply using `\label` would not work, because labels wait for the output routines to work, and there may not be any more invocations of the output routines. To force the write out we need to do an `\immediate` write.

```
1689 \newcommand{\pagesLTS@putlabelhyper}[2]{%
1690   \ifHy@pageanchor \relax%
1691   \else%
```

If the `hyperref` package is used, but `pageanchors` are disabled, the hyperlinking will not work.

```
1692   \PackageError{pagesLTS}{hyperref option pageanchor disabled}{%
1693     The \string\lastpageref{\#1} link doesn't work\MessageBreak%
1694     using hyperref with disabled option 'pageanchor'.\MessageBreak%
1695   }%
1696 \fi
```

If use of the `.aux`-file is allowed, the label for `LastPage` is written into that file, the page reference depending on the options, which where set for the `hyperref` package.

```

1748   \message{(pageslts)           cannot be shown, because pageslts does not use \string\label,}%
1749   \message{(pageslts)           but writes directly to the \jobname.aux file. ^^J}%
1750 \fi%

```

If the `hyperref` package is used, the format of the labels is somewhat longer.

```

1751 \ltx@ifpackageloaded{hyperref}{\pagesLTS@putlabelhyper{#1}{#2}}{%
  \else

```

If the `hyperref` package is not used, there will be no hyperlinks, and the label is written in the way of the old `lastpage` package. But we must remember to undo the label first, if it already exists.

```
1752     \if@filesw%
1753         \ifnum \value{pagesLTS.pnc.\pagesLTS@pnc}<2%
```

When the `nameref` package is used, `\newlabel` needs five instead of two arguments:

```
1754     \ltx@ifpackagelocked{nameref}{%
1755         \immediate\write\auxout{\string\newlabel{#1}{}{}{}{}{}{}{}{}}}{%
1756         \immediate\write\auxout{\string\newlabel{#1}{}{}{}{}{}{#2}}}{%
1757     }%
1758     \edef\pagesLTStampA{#1}%
1759     \edef\pagesLTStampB{pagesLTS.\pagesLTS@pnc.local}%
1760     \ifx\pagesLTStampA\pagesLTStampB%
1761         \edef\pagesLTStampA{#3}%
1762     \ifx\pagesLTStampA\pagesLTS@one%
```

Only when the third argument of `\pagesLTS@putlabel` is 1, we do need to undo the label. Otherwise there is no label to undo, and the `undolabl` package would give an error.

```
1763     \immediate\write\auxout{\string\undonewlabel{#1}}%
1764     \fi%
1765     \fi%
1766     \ltx@ifpackagelocked{nameref}{%
1767         \immediate\write\auxout{\string\newlabel{#1}{}{}{}{}{}{}{}{}}}{%
1768         \immediate\write\auxout{\string\newlabel{#1}{}{}{}{}{}{#2}}}{%
1769     }%
1770     \fi%
1771 }%
```

After the writeout we restore the page number again, since there might be other things still to be done.

```
1772     \addtocounter{page}{+1}%
1773 }
1774 }
```

```
\pagesLTS@putlabels \pagesLTS@putlabels is nearly identical to \pagesLTS@putlabelV:
```

```
1775 \newcommand{\pagesLTS@putlabels}{%
1776   \addtocounter{page}{-1}%
1777   \addtocounter{CurrentPage}{-1}%
1778   \addtocounter{pagesLTS.current.local.\pagesLTS@pnc}{-1}%
}
```

If `\pagenumbering{...}` has not been used, `\pagesLTS@pnc` is still zero (0, `\pagesLTS@zero`), and the according warning message is given.

```
1779 \ifx\pagesLTS@pnc\pagesLTS@zero%
1780   \PackageWarning{pagesLTS}{No page numbering scheme found:\MessageBreak%
1781     \pagesLTS@messageNPN }%
```

otherwise the numbered label is written, and if the page numbering scheme was not used before, the unnumbered label is written, too.

```
1782 \else%
1783   \pagesLTS@writelabel{\pagesLTS@pnc.\arabic{pagesLTS.pnc.\pagesLTS@pnc}}%
1784   \ifnum \value{pagesLTS.pnc.\pagesLTS@pnc}<2%
1785     \ifx\pagesLTS@pnc\pagesLTS@fns% \relax
1786     \else%
1787       \pagesLTS@writelabel{\pagesLTS@pnc}%
1788     \fi%
1789   \fi%
1790 \fi%
```

Before the label for the `LastPages` can be put, we must advance one page again, because `\pagesLTS@putlabel` itself goes back one page (and at its end forward again).

```
1791 \addtocounter{page}{+1}%
1792 \pagesLTS@putlabel{LastPages}{\theCurrentPage}{1}%
```

Here should follow a

```
\addtocounter{page}{-1},
```

but we have to remember to increase the page counters again, which were decreased at the start of this `\pagesLTS@putlabels` command, and that would include

```
\addtocounter{page}{+1},
```

therefore this two lines cancel each other and therefore just can be skipped. But the other counters have to be increased:

```
1793 \addtocounter{CurrentPage}{+1}%
1794 \addtocounter{pagesLTS.current.local.\pagesLTS@pnc}{1}%
1795 }
1796
```

\AtBeginDocument \AtBeginDocument we write into the `aux` file regarding the double loading of the package. Then it is checked whether the `endfloat` package has been loaded, whether it is newer than March 1992 (i.e. at least April 1992 v2.0), in which case it is compatible with this `pageslts` package.

If it is even newer than 2011/12/24, it is the recent version (as of the time of last revision of this documentation: 2011/12/25 v2.5d).

```
1797 \AtBeginDocument{%
1798   \if@filesw%
1799     \immediate\write\@auxout{\string\gdef\string\pagesLTS@loaded{p@gesLTSnotlo@ded}}%
1800   \fi%
1801   \@ifpackageloded{endfloat}%
1802   {\@ifpackagelater{endfloat}{1992/03/31}{ April 1992 v2.0}
1803    {\@ifpackagelater{endfloat}{2011/12/24}{ 2011/12/25 v2.5d
1804      \relax}}}
```

If it is compatible, but not the recent version, a warning is given:

```
1805   {\PackageWarningNoLine{pageslts}{Old endfloat package detected.\MessageBreak%
1806     There is a newer version of the endfloat package available.\MessageBreak%
1807     Please consider updating your version.\MessageBreak%
1808     The pageslts package might be incompatible with\MessageBreak%
1809     your current endfloat package.\MessageBreak%
1810   }%
1811 }
```

If it is so very old, that it is not compatible, an Error message is given:

```
1812   {\PackageError{pageslts}{Incompatible, very old endfloat package detected.}%
1813   {The very old version 2.0 (and earlier) of the\MessageBreak%
1814     endfloat package actually redefined the \string\enddocument ,\MessageBreak%
1815     and so interfered drastically with the LaTeX2e commands\MessageBreak%
1816     which make use of \string\AtEndDocument .\MessageBreak%
1817     Newer versions of the endfloat package exists\MessageBreak%
1818     (at least: v2.5d as of 2011/12/25)\MessageBreak%
1819     in modern documentation form,\MessageBreak%
1820     which should be available from CTAN.\MessageBreak%
1821     Please update your endfloat package\MessageBreak%
1822     for use with the pageslts package.\MessageBreak %
1823   }%
1824 }
1825 }

1935 \let\pagesLTS@tmpA\undefined%
1936 }
1937

```

\AfterLastShipout \AfterLastShipout is a command from HEIKO OBERDIEK's `atveryend` package (see above).

```
1938 \AfterLastShipout{%
```

If writing to the `.aux` file is allowed:

```
1939 \if@filesw%
```

The number of pages with the `fnsymbol` page numbering scheme, `\pagesLTS@esov`, is saved via the `.aux` file (if it is not zero):

```

1940 \ifx\pagesLTS@esov\pagesLTS@zero%
1941 \else%
1942     \immediate\write\@auxout{\string
1943         \pagesLTS@ifcounter{pagesLTS.fnsymbol.local}}%
1944     \immediate\write\@auxout{\string
1945         \setcounter{pagesLTS.fnsymbol.local}{\pagesLTS@esov}}%
1946 \fi%

```

If the `hyperref` package is in use, and the page numbering scheme of the last page is `fnsymbol`, everything is quite more complicated. Therefore `\lastpageref` is switched from simple `\lastpagereftxt` to the more difficult `\lastpagerefend`.

```

1947 \ltx@ifpackageloaded[hyperref]{%
1948     \ifx\pagesLTS@pnc\pagesLTS@fns%
1949         \immediate\write\@auxout{\string

```

`\AtEndAfterFileList` `\AtEndAfterFileList{...}` is even later:

“After the .aux file closing and reading L<sup>A</sup>T<sub>E</sub>X prints the file list if requested by `\listfiles`. Then this hook is executed.”

(atveryend package of HEIKO OBERDIEK, v1.7 as of 2011/04/23, newer version available.) Here it is used for a rerun hint. For example if the page numbering scheme of the last page of the `pageslts-example.tex` file is changed to `fnsymbol` and two runs of pdfL<sup>A</sup>T<sub>E</sub>X are done, pdfL<sup>A</sup>T<sub>E</sub>X will be happy and will not complain about changed labels. But indeed, a *third* run is necessary and indicated by the warning message below.

```
2010 \AtEndAfterFileList{%
2011   \ifx\pagesLTS@rerun\pagesLTS@one%
2012     \PackageWarningNoLine{pageslts}{%
2013       Label(s) may have changed.\MessageBreak%
2014       Rerun to get cross-references right%
2015     }%
2016   \fi%
2017 }
2018
```

\frontmatter \frontmatter often contains \pagenumbering, but for some unknown reason there are problems when another \pagenumbering with different page numbering scheme has been used before on the same page. (This would not make any sense anyway, because one page can only have one page numbering scheme.) This problem does not occur when two \pagenumbering commands are used inside normal text. Thus we need to check whether \frontmatter has been defined, whether it changes the page numbering scheme, and whether the page numbering scheme before \frontmatter was initiated at the same page.

First we need an \ifundefined, which neither requires  $\varepsilon$ -TeX nor defines the command, which is to be tested, to \relax (in which case it would be no longer undefined for further tests).

The code of Markus Kohm from <http://de.comp.text.tex.narkive.com/uNza5NAA/ifundef-and-ifdef> is fine for this:

```
\ifund@fined
2019 \newcommand*{\ifund@fined}[1]{%
2020   % from http://de.comp.text.tex.narkive.com/uNza5NAA/ifundef-and-ifdef
2021   \begingroup\expandafter\expandafter\expandafter\endgroup
2022   \expandafter\ifx\csname #1\endcsname\relax
2023     \expandafter\@firstoftwo
2024   \else
2025     \expandafter\@secondoftwo
2026   \fi
2027 }
2028

2029 \ifund@fined{\frontmatter}{\relax}{%
2030   \ltx@GlobalPrependToMacro{\frontmatter}{\pagesLTS@prefrontmatter}%
2031   \ltx@GlobalAppendToMacro{\frontmatter}{\pagesLTS@postfrontmatter}%
2032 }
2033
```

\pagesLTS@prefrontmatter At the beginning of the real (i.e. unchanged) \frontmatter (FMB), we remember the current (c) page numbering (pn) scheme: its name (n) and page number (p). \pagesLTS@FMBpncp would be 1 if the according \pagenumbering command was used on the same page at the \frontmatter.

```
2034 \newcommand{\pagesLTS@prefrontmatter}{%
2035   \xdef\pagesLTS@FMBpncn{\pagesLTS@pnc}%
2036   \xdef\pagesLTS@FMBpncp{\arabic{\pagesLTS.current.local.\pagesLTS@pnc}}%
2037 }
2038
```

\pagesLTS@postfrontmatter The named checks are performed and in case of the named problem an error message is given. Any idea how to automatically solve this issue?

```
2039 \newcommand{\pagesLTS@postfrontmatter}{%
2040   \xdef\pagesLTS@FMEpncn{\pagesLTS@pnc}%
2041   \ifx\pagesLTS@FMBpncn\pagesLTS@FMEpncn%
2042     \else%
2043       \ifx\pagesLTS@FMBpncn\pagesLTS@zero%
2044         \else%
2045           \ifx\pagesLTS@FMBpncp\pagesLTS@one%
```

```
2046 \PackageError{pageslts}{\string\pagenumbering\space before \string\frontmatter}{%
2047   Do not use \string\pagenumbering{\pagesLTS@FMBpncn} before \string\frontmatter \MessageBreak%

2051 \fi%
2052 \fi%
2053 \fi%
2054 }%
2055
2056 </package>
```

## 7 Installation

### 7.1 Downloads

Everything should be available on CTAN:, <ftp://ftp.ctan.org/tex-archive/>, but may need additional packages themselves.

pageslts.dtx For unpacking the pageslts.dtx file and constructing the documentation it is required:

- TeXFormat L<sup>A</sup>T<sub>E</sub>X 2 <sub>$\varepsilon$</sub> , 2011/06/27, v2 <sub>$\varepsilon$</sub> : CTAN:
- document class ltxdoc, 2007/11/11, v2.0u, CTAN:macros/latex/base/ltxdoc.dtx
- package holtxdoc, 2012/03/21, v0.24, CTAN:macros/latex/contrib/oberdiek/holtxdoc.dtx
- package hypdoc, 2011/08/19, v1.11, CTAN:macros/latex/contrib/oberdiek/hypdoc.dtx
- package geometry, 2010/09/12, v5.6, CTAN:macros/latex/contrib/geometry/geometry.dtx
- package ulem, 2012/05/18, no version number given, CTAN:macros/latex/contrib/ulem/

pageslts.sty The pageslts.sty for L<sup>A</sup>T<sub>E</sub>X 2 <sub>$\varepsilon$</sub>  (i. e. all documents using the pageslts package) requires:

- TeXFormat L<sup>A</sup>T<sub>E</sub>X 2 <sub>$\varepsilon$</sub> , 2011/06/27, v2 <sub>$\varepsilon$</sub> , CTAN:
- package atveryend, 2011/06/30, v1.8, CTAN:macros/latex/contrib/oberdiek/atveryend.dtx
- package everyshi, 2001/05/15, v3.00, CTAN:macros/latex/contrib/ms/everyshi.dtx
- package kvoptions, 2011/06/30, v3.11, CTAN:macros/latex/contrib/oberdiek/kvoptions.dtx
- package letltxmacro, 2010/09/02, v1.4, CTAN:macros/latex/contrib/oberdiek/letltxmacro.dtx
- package ltxcmds, 2011/11/09, v1.22, CTAN:macros/latex/contrib/oberdiek/ltxcmds.dtx
- package rerunfilecheck, 2011/04/15, v1.7, CTAN:macros/latex/contrib/oberdiek/rerunfilecheck.dtx
- package undolabl, 2012/01/01, v1.0k, CTAN:macros/latex/contrib/undolabl/undolabl.dtx

pageslts-example.tex The pageslts-example.tex requires the same files as all documents using the pageslts package, and additionally:

- class article, 2007/10/19, v1.4h, from classes.dtx: CTAN:macros/latex/base/classes.dtx
- package alphalph, 2011/05/13, v2.4, CTAN:macros/latex/contrib/oberdiek/alphalph.dtx
- package lipsum, 2011/04/14, v1.2, CTAN:macros/latex/contrib/lipsum/lipsum.dtx
- package showkeys, 2007/08/07, v3.15, CTAN:macros/latex/required/tools/showkeys.dtx
- package hyperref, 2012/11/06, v6.83m, CTAN:macros/latex/contrib/hyperref.zip
- package pageslts, 2014/01/19, v1.2c, CTAN:macros/latex/contrib/pageslts/pageslts.dtx

(Well, it is the example file for this package, and because you are reading the documentation for the pageslts package, it can be assumed that you already have some version of it – is it the current one?)

<code>papermas</code>	The <code>papermas</code> package is not required, but requires itself the the <code>pageslts</code> package and can be considered as kind of add-on:
	- package <code>papermas</code> , 2011/08/22, v1.0h, <a href="#">CTAN:macros/latex/contrib/papermas/papermas.dtx</a>
<code>endfloat</code>	The <code>endfloat</code> package is not required, but because the <code>pageslts</code> package is incompatibel with very old versions of the <code>endfloat</code> package (see subsection 3.3), here the recent one is listed:
	- package <code>endfloat</code> , 2011/12/25, v2.5d, <a href="#">CTAN:macros/latex/contrib/endfloat/endfloat.dtx</a>
<code>prelim2e</code>	The <code>prelim2e</code> package is not required either, but because <code>Prelim@EveryShipout</code> code was taken from that package, it is listed, too:
	- package <code>prelim2e</code> , 2009/05/29, v1.3, <a href="#">CTAN:macros/latex/contrib/ms/prelim2e.dtx</a>
<code>fancyhdr</code>	Neither <code>fancyhdr</code> nor <code>nccfancyhdr</code> package is required (the <code>lastpage</code> package used its predecessor <code>fancyheadings</code> ), but because they were mentioned, also they are listed here:
<code>nccfancyhdr</code>	
	- package <code>fancyhdr</code> , 2005/03/22, v3.2, <a href="#">CTAN:macros/latex/contrib/fancyhdr.zip</a>
	- package <code>nccfancyhdr</code> , 2004/12/07, v1.1, <a href="#">CTAN:macros/latex/contrib/ncctools/source/nccfancyhdr.dtx</a>
<code>lastpage</code>	As possible alternatives in section 4 there are listed
<code>totpages</code>	
<code>totcount</code>	
<code>nofm</code>	
<code>countito</code>	
<code>zref</code>	
	- package <code>lastpage</code> , 2013/01/28, v1.2l, <a href="#">CTAN:macros/latex/contrib/lastpage/lastpage.dtx</a>
	- package <code>totpages</code> , 2005/09/19, v2.00, <a href="#">CTAN:macros/latex/contrib/totpages/totpages.dtx</a>
	- package <code>totcount</code> , 2011/01/25, v1.2, <a href="#">CTAN:macros/latex/contrib/totcount/totcount.dtx</a>
	- package <code>nofm</code> , 1991/02/25, v??.?, <a href="ftp://tug.ctan.org/pub/tex-archive/obsolete/macros/latex209/contrib/misc/nofm.sty">ftp://tug.ctan.org/pub/tex-archive/obsolete/macros/latex209/contrib/misc/nofm.sty</a> , does not work with e.g. <code>hyperref</code>
	- package <code>countito</code> , 2009/05/24, v2.1, <a href="#">CTAN:macros/latex/contrib/ms/countito.dtx</a>
	- package <code>zref</code> , 2012/04/04, v2.24, <a href="#">CTAN:macros/latex/contrib/oberdiek/zref.dtx</a>
<code>Oberdiek</code>	All packages of HEIKO OBERDIEK's bundle 'oberdiek' (especially <code>alphalph</code> , <code>atveryend</code> , <code>holtxdoc</code> , <code>letltxmacro</code> , <code>ltxcmds</code> , <code>kvoptions</code> , <code>rerunfilecheck</code> , and <code>zref</code> ) are also available in a TDS compliant ZIP archive: <a href="#">CTAN:install/macros/latex/contrib/oberdiek.tds.zip</a> .
<code>alphalph</code>	
<code>atveryend</code>	
<code>holtxdoc</code>	
	It is probably best to download and use this, because the packages in there should be both recent and compatible.
<code>letltxmacro</code>	
<code>ltxcmds</code>	
<code>kvoptions</code>	
<code>rerunfilecheck</code>	
<code>zref</code>	
<code>Münch</code>	A hyperlinked list of my (other) packages can be found at <a href="http://ctan.org/author/muench-hm">http://ctan.org/author/muench-hm</a> .

## 7.2 Package, unpacking TDS

**Package.** This package is available on [CTAN](#):

[CTAN:macros/latex/contrib/pageslts/pageslts.dtx](#)

The source file.

[CTAN:macros/latex/contrib/pageslts/pageslts.pdf](#)

The documentation.

[CTAN:macros/latex/contrib/pageslts/pageslts-example.pdf](#)

The compiled example file, as it should look like.

[CTAN:macros/latex/contrib/pageslts/README](#)

The README file.

There is also a pageslts.tds.zip available:

[CTAN:install/macros/latex/contrib/pageslts.tds.zip](#)

Everything in TDS compliant, compiled format.

which additionally contains

pageslts.ins	The installation file.
pageslts.drv	The driver to generate the documentation.
pageslts.sty	The .style file.
pageslts-example.tex	The example file.

For required other packages, see the preceding subsection.

**Unpacking.** The .dtx file is a self-extracting `docstrip` archive. The files are extracted by running the .dtx through plain `TEX`:

```
tex pageslts.dtx
```

About generating the documentation see paragraph [7.4](#) below.

**TDS.** Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

pageslts.sty	→ tex/latex/pageslts.sty
pageslts.pdf	→ doc/latex/pageslts.pdf
pageslts-example.tex	→ doc/latex/pageslts-example.tex
pageslts-example.pdf	→ doc/latex/pageslts-example.pdf
pageslts.dtx	→ source/latex/pageslts.dtx

If you have a `docstrip.cfg` that configures and enables `docstrip`'s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

## 7.3 Refresh file name databases

If your TeX distribution (teTeX, mikTeX,...) relies on file name databases, you must refresh these. For example, teTeX users run `texhash` or `mktexlsr`.

## 7.4 Some details for the interested

**Unpacking with L<sup>A</sup>T<sub>E</sub>X.** The `.dtx` chooses its action depending on the format:

**plain TeX:** Run `docstrip` and extract the files.

**L<sup>A</sup>T<sub>E</sub>X:** Generate the documentation.

If you insist on using L<sup>A</sup>T<sub>E</sub>X for `docstrip` (really, `docstrip` does not need L<sup>A</sup>T<sub>E</sub>X), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{pageslts.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

**Generating the documentation.** You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put the following line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfL<sup>A</sup>T<sub>E</sub>X:

```
pdflatex pageslts.dtx
makeindex -s gind.ist pageslts.idx
pdflatex pageslts.dtx
makeindex -s gind.ist pageslts.idx
pdflatex pageslts.dtx
```

## 7.5 Compiling the example

The example file, `pageslts-example.tex`, can be compiled via

```
latex pageslts-example.tex
```

or (recommended)

```
pdflatex pageslts-example.tex
```

and will need *at least* (!) three compiler runs to get all references right.

## 8 Acknowledgements

I (H.-Martin Münch) would like to thank JEFFREY P. GOLDBERG for inventing the `lastpage` package. This package first started as a revision of the `lastpage` package, but it became obvious that a replacement was needed to accomplish what this package does. Further I would like to thank HEIKO OBERDIEK for providing the `\errororalphalph` command as well as a lot (!) of useful packages (from which I also got everything I know about creating a file in `dtx` format, ok, say it: copying), MARTIN SCHRÖDER for his `prelim2e` package, from which I got the `Prelim@EveryShipout` code, ULRICH DIEZ for his code for the `undolabl` package, which allows overwriting of labels, ANDRES LÖH for the code to determine the current page numbering scheme, and the `news:comp.text.tex` and `news:de.comp.text.tex` newsgroups for their help in all things T<sub>E</sub>X. For bug reports I thank Michał Herman and kwikwi.

## 9 History

### [1994/06/17, `lastpage`]

- `lastpage` v0.99a: First shot by Jeffrey P. Goldberg.

### [1994/06/25, `lastpage`]

- `lastpage` v0.1b: Last version number created by Jeffrey P. Goldberg.

### [1994/07/20, `lastpage`]

- `lastpage` v0.1b (again): Documentation updated by Jeffrey P. Goldberg.  
The main source code of the `lastpage` package 1994/07/20 v0.1b was:

```
\NeedsTeXFormat{LaTeX2e}[1994/06/01]
\ProvidesPackage{lastpage}[1994/07/20 v0.1b
    LaTeX2e package for refs to last page number (JPG)]
\def\lastpage@putlabel{\addtocounter{page}{-1}%
    \immediate\write\@auxout{\string
    \newlabel{LastPage}{{}\{\thepage\}}\string
    \addtocounter{page}{1}\string
    \AtEndDocument{%
        \message{AED: lastpage setting LastPage}\string
        \clearpage\lastpage@putlabel}\string
    \endinput}
```

and then `hyperref` and `revtex` even redefine `\lastpage@putlabel`.

### [2010/02/18, `lastpage`]

- `lastpage` v1.1: Proposed `LastPages` label by H.-Martin Münch on `news:comp.text.tex`, see e.g. <http://groups.google.com/group/comp.text.tex/msg/4407493da9c747f0?dmode=source>; now available in this `pageslts` package.

## [2010/05/15 v1.0 **pagesLTS**]

- **pagesLTS** Complete rewriting of the package, so as to work with **more than one page numbering scheme**; using `\AtVeryEnd` for `VeryLastPage`; upgrade from `fancyheadings` to `fancyhdr` package, then removed the need for a `fancyhdr` package at all.
- Rewriting of the package, so as to work with the `fnsymbol` page numbering scheme (even on the last page).
- Introduction of `kvoptions` into this package.
- Check for incompatible `endfloat` package.
- `lastpage209.sty` for L<sup>A</sup>T<sub>E</sub>X209.
- Replacement of `\filedate`, `-version`, `-name`,... because of L<sup>A</sup>T<sub>E</sub>X bug 2705:  
Synopsis: Possible problem with `\fileversion` and `\filedate`  
<http://www.latex-project.org/cgi-bin/ltxbugs2html?category=LaTeX&responsible=anyone&state=anything&keyword=lastpage&pr=latex%2F2705&search=>
- `alphalph` support included.
- Page numbering extension `\erroralph` by HEIKO OBERDIEK included.
- (Page-) Numbering extension for `roman` and Roman numbers included.
- Incompatible, old `lastpage` package “killed”.
- Example `pagesLTS-example.tex`.
- Alternatives listing (section 4).
- Listing of T<sub>E</sub>X sources (subsection 7.1).
- A lot (!) of details.
- Complete rewriting of the documentation.
- Everything in DTX framework.
- New package name: `pagesLTS` for Last, Total, and page numbering Schemes pages.

## [2010/06/01 v1.1(a) **pagesLTS**]

- Abstract changed: Negative `roman` and Roman page numbers are now possible.
- Some references to other packages have been updated.
- Several typing mistakes have been corrected (and new ones have been included probably) - both in the `style` file as well as in this documentation.

## [2010/06/03 v1.1b **pagesLTS**]

- Corrected a bug in \XXRoman, where \roman instead of \Roman had been used.
- New **papermas** package mentioned.
- Updated references to other packages.
- TDS locations updated.
- Several changes in the documentation and the Readme file.

## [2010/06/24 v1.1c **pagesLTS**]

- **holtxdoc** warning in **drv** updated.
- Removed CRLF line endings from the **dtx** file.
- Corrected the location of the package at CTAN. (In this version TDS was still missing due to packaging error.)
- Corrected Message format in **pagesLTS.ins**.
- Updated references to other packages: **hyperref**, **undolabl**, and **papermas**.
- Added a list of my other packages.

## [2010/07/15 v1.1d **pagesLTS**]

- Added the `\@ifclassloaded{revtex4}` code for `\lastpage@putlabel` (changed to `\pagesLTS@putlabelhyper`) from the **hyperref** package as **comment** - what is the meaning of that code?
- In the documentation added the explanation of the occurrence of multiply definitions of the **LastPage** label with **lastpage**, **pagesLTS**, **hyperref** package (in that order).
- Corrected the given location of the **pagesLTS.tds.zip** file at CTAN.
- Updated references to other packages: **hyperref** and **undolabl**.
- Updated to new version of **undolabl** package [2010/07/15] v1.0d, which uses `\undonewlabel` with only one instead of two arguments.
- Added a warning message, if **hyperref** and **pdfpages** are *both* used. (Should not **hyperref** give this warning?)
- The usual correction of typos and minor details in the documentation.

## [2010/07/29 v1.1e pagesLTS]

- Removed `lastpage209.sty`, because it is now contained in the `lastpage.dtx` file,  $v \geq 1.2a$ .
- Removed the `\@ifclassloaded{revtex4}` code for `\lastpage@putlabel`.
- Handling of `lastpage` package adapted to updated version 1.2(a).
- There is a new version of the used `geometry` package: 2010/07/13, v5.5.
- Corrected error in `lastpage` code [1994/07/20 v0.1b] given in [9 History](#).
- Version handling for `undolabl` package updated.
- Included a `\CheckSum`.
- Some minor details.

## [2010/08/08 v1.1f pagesLTS]

- Version 1.1e had a bug: `AlphAlph` was replaced by `alphalph` (because that package is named like this), but this was done also in commands and definitions - now reverted.
- The recent version of the Adobe Reader ~~is~~ was 9.3.3 (instead of 9.3.1).

## [2010/08/12 v1.1g pagesLTS]

- Now the rerun warning is given *after* e.g. the `\listfiles`, increasing the chance of the user to read it (trick found in HARALD HARDERS' `fnbreak` package, thanks!).

## [2010/08/23 v1.1h pagesLTS]

- Renamed `\XXRoman` to `\XRoman`.
- Reduced the number of needed counters.
- Removed wrong % from the driver file.
- Changed the `\unit` definition (got rid of an old `\rm`).
- Without use of the `hyperref` package, labels of type `pagesLTS.<page numbering scheme>.local` became multiply defined. Now an `\undolabl` was inserted.
- Diverse details.

## [2010/08/25 v1.1i pagesLTS]

- Bug fix: `tcilatex` defines the `\hyperref` command, therefore for `hyperref` package detection this had to be changed to `\Hy@Warning`.

## [2010/09/12 v1.1j pagesLTS]

- Bug fix: L<sup>A</sup>T<sub>E</sub>X issued a “Label(s) may have changed. Rerun to get cross-references right.”-warning, even if labels had not changed but were overwritten.
- Starred version of \lastpageref for suppressing hyperlinks introduced.
- A lot of details.

## [2010/09/22 v1.1k pagesLTS]

- When no fnsymbol pagenumbering scheme is used, the respective counters are not defined, saving three counters.
- Updated to version 2010/09/13 v6.81n of the hyperref package (which needs two more counters than the old 2010/06/18 v6.81g version).
- Moved the package from .../latex/muench/pagesLTS/... to .../latex/pagesLTS/....  
(Please make sure that the old version of the pagesLTS package was properly uninstalled from your system.)

## [2010/09/27 v1.1l pagesLTS]

- Bug fix: \PackageError{pagesLTS}{pagenumbering missing}{\pagesLTS@messageNPN } had to be moved to the outside of \EveryShipout, because it wrote its message into the document instead to the screen and the .log-file.
- Updated to version 2010/04/24 v0.19 of the holtxdoc package.
- lastpage package has a new version: 2010/09/24 v1.2f.

## [2011/02/01 v1.1m pagesLTS]

- Added a new warning subsection about hyperref and repeated page numbers.
- Bug fix: Missing % after -\romannumeral\number-\arabic{#1} added.
- The (then) new version v2.4i of the endfloat package was then even older than 15 years.
- Put a warning in the documentation as well as in the log-file and at the screen during compilation about the showkeys package. (The labels of the pagesLTS package cannot be shown by the showkeys package.)
- Bug fix: In some situations a rerun warning was given even if no rerun was necessary.
- Replaced the list of my packages with a link to a web page list of those, which has the advantage of showing the recent versions of all those packages.
- There is a new version of the used geometry package: 2010/09/12, v5.6.
- There ~~is~~ was a new version of the hyperref package: 2010/12/16, v6.81z.
- The recent version of the Adobe Reader ~~is~~ was X (10.0.0) (instead of 9.3.3). Its handling of special page numbers was improved.

- The option `alphMult` is now set to `ab` by default.
- The option `AlphMulti` is now set to `AB` by default.
- There is a new version of the `lastpage` package: 2011/02/01, v1.2g.
- There is a new version of the used `undolabl` package: 2011/02/01, v1.0h.
- There ~~is was~~ a new version of the `papermas` package: 2011/02/01, v1.0e.
- Some details.

## [2011/03/16 v1.1n pagesLTS]

- Bug fix: Handling of option `pagecontinue=false` changed. When `pagecontinue=false` was used, but also a `alphMult`, `AlphMulti`, `fnsymbolmult`, `romanMult` or `RomanMulti` option other than 0 or `false`, respectively, was used, the page numbering *was* continued/extended. Now a warning is issued in case of such option clash and `pagecontinue=false` is heeded, disabling all continuation.
- Bug fix: `\ProvidesPackage{pagesLTS}` contained an older date (2010/09/27 of v1.1l instead of 2011/02/01 of v1.1m).
- Bug fix: The `ulem` package is needed to generate the documentation from the `pagesLTS.dtx` file, but was not listed as necessary package.
- Bug fix: One reference to an outdated version of `undolabl` package, replaced by the recent version.
- There ~~is was~~ a new version of the `hyperref` package: 2011/03/09, v6.82d.
- The recent version of the Adobe Reader ~~is was~~ X (10.0.1) (instead of 10.0.0).
- Some minor details.

## [2011/03/17 v1.1o pagesLTS]

- There ~~is was~~ a new version of the `lipsum` package: 2011/02/08, v1.1.
- Documentation and ReadMe bug fix: This `pagesLTS` package is located at [CTAN:macros/latex/contrib/pageslts/](#) instead of .../`pagesLTS/`.
- There is a new (possible) alternative package, `totcount`, see section 4.
- Bug fix: There was a reference to `lastpage` 1994/07/20, v0.1b, instead of the current version.

## [2011/08/08 v1.2a]

- Renamed the package from `pagesLTS` to `pageslts` (keeping family, prefix, internal commands,... as `pagesLTS`). Added checking against double loading as `pagesLTS` and `pageslts`.
- The `holtxdoc` package was fixed (recent: 2011/02/04, v0.21), therefore the warning in `drv` could be removed.
- There is a new version of the `ulem` package: 2011/03/18 (no version number given).
- There is a new version of the `lipsum` package: 2011/04/14, v1.2.
- There ~~is~~ was a new version of the used `hyperref` package: 2011/04/17, v6.82g.
- `\AtEndAfterFileList` from the ~~then~~ new version of the `atveryend` package, 2011/04/23, v1.7, by HEIKO OBERDIEK, is now used for the rerun hint instead of appending to `\@dofilelist`.
- The recent version of the Adobe Reader ~~is~~ was 10.1.0 (instead of 10.0.1).
- Now defining 2: `\def\pagesLTS@two{2}` (for example for the `thumbs` package) and 3: `\def\pagesLTS@three{3}`.
- Replaced `\texttt{\textbackslash...}` by `|...|` in the `dtx` and by `\verb|...|` in the example (where possible).
- When the `alphalph` package is needed, it is loaded via `\RequirePackage` instead of crashing with an error message.
- There are new version of the packages `papermas`, `undolabl`, and `lastpage`.
- A lot of details (also in the documentation).

## [2013/01/28 v1.2b]

- Updated to `TeX live 2012` (for compiling the documentation and example) and installed the available updates. Therefore I can no longer test whether `pageslts` works with earlier versions of `LATeX`. (It probably does, but there is no guarantee.)
- Replaced `\let` by `\LetLtxMacro`.
- New versions of Adobe Reader and of the packages `alphalph`, `atveryend`, `endfloat`, `holtxdoc`, `hypdrc`, `hyperref`, `kvoptions`, `lastpage`, `papermas`, `ulem`, `undolabl`, and `zref` have become available.
- The `nameref` package redefines `\label` to have five arguments instead of two, therefore `\newlabel{LastPage}{}{\thepage}{}{}{}` instead of `\newlabel{LastPage}{}{\thepage}{}{}` must be used. (Bug reported at <http://tex.stackexchange.com/q/95541/6865>, thanks to Michał Herman!) Fixed.
- Updates to a lot of details, also in the documentation.

- Bug: missing loop, fix: inserted.
- Bug: when option `pagecontinue=false` was set, the extension of the page numbering schemes was disabled by mistake, fixed.
- Now using `\ltx@ifpackageloaded` from the `ltxcmds` package for checking (even after `\AtBeginDocument`) whether a package has been loaded.
- Bug: incompatibility with `lineno` because of a mistake in the redefined `\pagenumbering`, fixed. (Bug reported by kwikwi, thanks!)
- Bug: When `\pagenumbering` preceded `\frontmatter` on the same page but with different argument than the `\pagenumbering`, which was inside `\frontmatter`, then some labelling got mixed up. (Also this bug reported by kwikwi, thanks!) While this is not fixed automatically, now an appropriate error message is given. (Two different page numbering schemes on the same page make no sense anyway.)
- Updates of minor details.

When you find a mistake or have a suggestion for an improvement of this package, please send an e-mail to the maintainer, thanks!

(Please see BUG REPORTS in the README.)

Note: Y is not missing in the following index, but no command beginning with this letter has been used in this `pageslts` package.

## 10 Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; plain numbers refer to the code lines where the entry is used.
