

The `blowup` package*

Rolf Niepraschk
Rolf.Niepraschk@gmx.de

November 14, 2008

Abstract

This package only defines the user-level macro `\blowUp`, which can be used to upscale or downscale all pages of a document. It is similar to the \TeX primitive `\magnification` but more accurate and user-friendly. `\blowUp` may be useful for the creation of posters from a normal-sized document and for many kinds of fine adjustments of a ready typesetted document (e.g., minor changes of scaling and position of the pages).

Contents

1	Usage	1
2	Required Packages	2
3	Implementation	2

1 Usage

Load the package after other packages that affect the paper size (e.g., `geometry` and `hyperref`). Then call the macro `\blowUp` before `\begin{document}` to scale the document.

```
\usepackage{blowup}  
\blowUp{key=value}
```

key	value
<code>paper</code>	The final paper size: <code>letter</code> , <code>legal</code> , <code>executive</code> or a paper size from the ISO/DIN paper series A, B, C, D (e.g., <code>a8</code> , <code>c7</code> ,..., <code>b1</code> , <code>a0</code>) or a pair of dimensions in curly brackets (e.g., <code>paper={925mm,1225mm}</code>) or the letter 'x' followed by a scaling factor (e.g., <code>paper=x1.414213</code>).

*This document corresponds to `blowup 0.1j`, dated 2008/11/14.

landscape	Exchanges paperwidth and paperheight: true (the same as no value) or false .
noscale	No scaling of the original paper size: true (the same as no value) or false .
pos	Position of the page on the paper: left or right , inside or outside , top or bottom (only the first letter is significant; default is centering), or a pair of dimensions in curly brackets which means the offset from the lower left or lower outside corner of the final paper. Only meaningful for noscale=true and up-scaled paper size.
onepage	Suppresses the second page and all following pages: true (the same as no value) or false . Useful for creating a one-side paper like a poster.

See also the example documents `blowup-test?.tex`.

2 Required Packages

The `blowup` package requires the following packages: `everyshi`, `graphics`, `keyval`, and `typearea`.

3 Implementation

```

1 <*package>
2 \RequirePackage{everyshi,graphics,keyval}
3 \@ifpackageloaded{typearea}{}{%
4   \newcommand*\BL@save@dimen[1]{%
5     \ifundefined{BL@#1}{%
6       \expandafter\newlength\csname BL@#1\endcsname}{}%
7     \csname BL@#1\endcsname\csname #1\endcsname
8     \g@addto@macro\BL@restore@dimens{%
9       \csname #1\endcsname\csname BL@#1\endcsname}%
10  }%
11  \newcommand*\BL@restore@dimens{}%

```

Some dimensions changed by `typearea` must be saved and restored.

```

12  \BL@save@dimen{textwidth}%
13  \BL@save@dimen{textheight}%
14  \BL@save@dimen{evensidemargin}%
15  \BL@save@dimen{oddsidemargin}%
16  \BL@save@dimen{topmargin}%
17  \BL@save@dimen{headheight}%
18  \BL@save@dimen{headsep}%

```

```

19 \BL@save@dimen{topskip}%
20 \BL@save@dimen{footskip}%
21 \BL@save@dimen{baselineskip}%
Prevent an error if \l@addto@macro is already defined.
22 \let\l@addto@macro=\relax
23 \RequirePackage{typearea}%
24 \BL@restore@dimens
25 \let\BL@save@dimen=\relax
26 \let\BL@restore@dimens=\relax
27 }
28 \providecommand*\vb@xt@{\vbox to}
