

diagbox Package (v2.0)

⇒ 中文版

Making Table Heads with Diagonal Lines

Leo Liu

leoliu.pku@gmail.com

2011/11/23

1 Introduction

`diagbox` is a replacement of old `slashbox` package¹. I write this package simply because that `slashbox` is not available in T_EX Live for licensing problems. `slashbox` has no explicit license information available, but `diagbox` is under LPPL.

`diagbox` is a modern alternative of `slashbox`. I changed the user interface to use a key-value syntax, get rid of some restrictions of `slashbox`, use `pict2e` to draw diagonal lines. Especially, this package also provides ability to make a box with two diagonal lines in it. All these can be obtained by a `\diagbox` command.

As a replacement of `slashbox`, `diagbox` package also provides compatible macros of `slashbox`, but the result is a little different.

To use `diagbox`, ε -T_EX is needed. And `diagbox` requires `pict2e`, `keyval` and `fp` packages.

2 Usage

2.1 Basic usage

To load the package, just put this in the preamble:

```
\usepackage{diagbox}
```

`\diagbox` `\diagbox` is the main command. It can take two arguments, to produce a box with a diagonal line from north west to south east.

¹By Koichi Yasuoka and Toru Sato. Available on CTAN:/macros/latex/contrib/slashbox/slashbox.sty

For example:

		Day	Mon	Tue	Wed
Time					
Morning		used	used		
Afternoon			used	used	

```

1 \begin{tabular}{|l|ccc|}
2 \hline
3 \diagbox{Time}{Day} & Mon & Tue & Wed \\
4 \hline
5 Morning & used & used & \\
6 Afternoon & & used & used \\
7 \hline
8 \end{tabular}
```

\diagbox can also take three arguments, to draw a table head with two diagbox lines.

For example,

```

1 \begin{tabular}{|l|ccc|}
2 \hline
3 \diagbox{Time}{Room}{Day} & Mon & Tue & Wed \\
4 \hline
5 Morning & used & used & \\
6 Afternoon & & used & used \\
7 \hline
8 \end{tabular}
```

		Day	Mon	Tue	Wed
Room					
Time					
Morning		used	used		
Afternoon			used	used	

2.2 More options

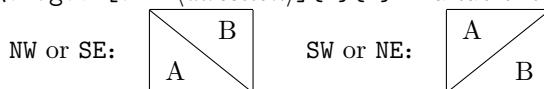

\diagbox can take a key-value list as an optional argument to specify the width and height of the box, the direction of the diagonal line, and the trimming margins:

width Specify the width of the box explicitly. If it is omitted, package will calculate a width automatically.

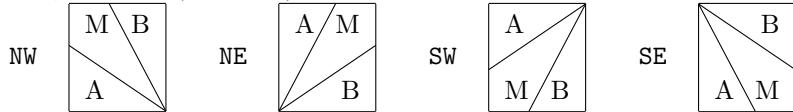

height Specify the height of the box explicitly. If it is omitted, package will calculate a height automatically.

dir Specify the direction of the diagonal line. The value can be NW, NE, SW and SE. Default value is NW. The meaning of the values see below.

- \diagbox[dir=<direction>]{A}{B} in a table looks:

- `\diagbox[dir=<direction>]{A}{M}{B}` in a table looks:

trim Specify the margin to be trimmed. The value can be `l`, `r`, and `lr`, `rl`. This helps the slash line exceeds the boundary when `@{}` column specifier is used.

Here is a more complex example to show the usage of the options:

```

1 \begin{tabular}{|@{}l|c|c|r@{}|}
2 \hline
3 \diagbox[width=5em,trim=l]{Time}{Day} & Mon & Tue & Wed\\
4 \hline
5 Morning & used & used & used\\
6 \hline
7 Afternoon & used & \diagbox[dir=SW,height=2em,trim=r]{A}{B} \\
8 \hline
9 \end{tabular}

```

	Day	Mon	Tue	Wed
Time				
Morning	used	used	used	
Afternoon		used	A \diagbox[B]	

What's more, you can use `\\"` to break lines in `\diagbox`. Manual setting of the height of the head may be needed. For example,

```

1 \begin{tabular}{|c|}
2 \hline
3 \diagbox[height=45pt]{line\\heads}{column\\heads} \\
4 \hline
5 \end{tabular}

```

2.3 Compatibility with `slashbox`

`diagbox` package emulates `slashbox` and also prevents `slashbox` to be loaded.

`diagbox` package provides `\slashbox` and `\backslashslashbox` which syntax similar to `slashbox` package. However, the results of the two packages are a little different. These two commands are for compatibility only, it is better to use `\diagbox` instead for new documents.

`\backslashslashbox` `\backslashslashbox` works as `\diagbox`, but it takes two optional arguments to specify the

`width` and `trim` options.

`\slashbox` `\slashbox` works as `\diagbox[dir=SW]`, and takes two optional arguments to specify the `width` and `trim` options.

For example,

alpha	A	B
num		
1	A1	B1
2	A2	B2

```
1 \begin{tabular}{|c|c|c|} \hline
2 \backslash slashbox[2cm]{num}{alpha}
3   & A & B \\ \hline
4 1 & A1 & B1 \\ \hline
5 2 & A2 & B2 \\ \hline
6 \end{tabular}
```

3 Known issues and TODO

Known issues:

- The result of `\slashbox` and `\backslash slashbox` is different with `slashbox` package. The algorithms to calculate the width and height are different; and the results of the second optional argument of `\slashbox` (i.e. `trim` key in `\diagbox`) in the two packages are differernt.

This is not a bug. Usually the width calculated by `diagbox` is more safe than `slashbox`.

- The cell with `\diagbox` should be the widest one of the column. Otherwise the slash line cannot exceeds the boundary. For example,

B
A
Very long term

```
1 \begin{tabular}{|c|} \hline
2 \diagbox{A}{B} \\ \hline
3 Very long term \\ \hline
4 \end{tabular}
```

This can be solved by setting a wider `width` option of `\diagbox` manually.

TODO:

- Improve the document of the source code. The algorithm of `\diagbox@triple` should be explained in detail. However, the explanations would be only available in Chinese, I'm sorry.

diagbox 宏包 (v2.0)

[⇒ English Version](#)

制做斜线表头

刘海洋

leoliu.pku@gmail.com

2011/11/23

4 简介

diagbox 设计用来代替旧的 `slashbox` 宏包¹。编写这个宏包的缘起是 `slashbox` 因为缺少明确的自由许可信息，被 TeX Live 排除。这个宏包是在 LPPL 协议下发行的。

diagbox 是 `slashbox` 宏包的一个现代的版本。它采用了新的 key-value 式语法参数，去除了 `slashbox` 原有的一些长度限制，并调用 `pict2e` 宏包画斜线；特别还添加了绘制两条斜线的表头的新功能。

作为 `slashbox` 的代替，diagbox 除了提供自己的新命令，也提供了 `slashbox` 原有的两个命令，语法不变，编译结果略有区别。

diagbox 依赖 ε -TeX 扩展（这在目前总是可用的），依赖 `pict2e`, `keyval` 和 `fp` 宏包。

5 用法说明

5.1 基本用法

要使用本宏包，首先在导言区调用：

```
\usepackage{diagbox}
```

\diagbox \diagbox 是宏包提供的主要命令。它可以带有两个必选参数，表示要生成斜线表头的两部分内容。默认斜线是从西北到东南方向的。

¹作者 Koichi Yasuoka (安岡孝一) 与 Sato Toru (佐藤徹)。宏包见 CTAN://macros/latex/contrib/slashbox/slashbox.sty。

例如：

		Day	Mon	Tue	Wed
Time					
Morning		used	used		
Afternoon			used	used	

```

1 \begin{tabular}{|l|ccc|}
2 \hline
3 \diagbox{Time}{Day} & Mon & Tue & Wed \\
4 \hline
5 Morning & used & used & \\
6 Afternoon & & used & used \\
7 \hline
8 \end{tabular}

```

\diagbox 也可以接受三个参数，这样就会生成带有两条斜线的表头，例如：

```

1 \begin{tabular}{|l|ccc|}
2 \hline
3 \diagbox{Time}{Room}{Day} & Mon & Tue & Wed \\
4 \hline
5 Morning & used & used & \\
6 Afternoon & & used & used \\
7 \hline
8 \end{tabular}

```

		Day	Mon	Tue	Wed
Time					
Morning		used	used		
Afternoon			used	used	

5.2 更多参数设置

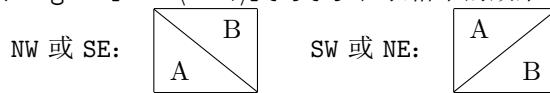

\diagbox 还可以在前面带一个可选参数，里面用 key-value 的语法设置宽度、方向等更多的选项：

width 明确指定盒子的总宽度。如果省略，则会自动计算能够放下所有内容的宽度。

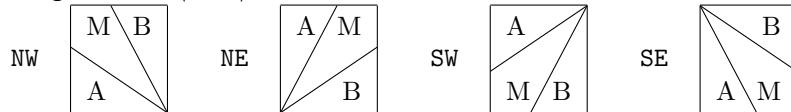

height 明确指定盒子的总高度。

dir 指定斜线方向。可以取 NW（西北）、NE（东北）、SW（西南）、SE（东南）四种方向。在只有一条斜线的表头中，NE 与 SW、SE 与 NW 是等价的。斜线方向的默认值是 NW。

\diagbox[dir=<方向>]{A}{B} 在表格中的效果：

\diagbox[dir=<方向>]{A}{M}{B} 在表格中的效果：

trim 设置左边界或右边界不计算额外的空白，可以取值为 `l`, `r`, `lr` 或 `rl`。这个选项在列格式包含 `@{}` 时将会有用。

一个更复杂的例子：

```

1 \begin{tabular}{|@{}l|c|c|r@{}|}
2 \hline
3 \diagbox[width=5em,trim=l]{Time}{Day} & Mon & Tue & Wed \\
4 \hline
5 Morning & used & used & used \\
6 \hline
7 Afternoon & used & \diagbox[dir=SW,height=2em,trim=r]{A}{B} \\
8 \hline
9 \end{tabular}

```

	Day	Mon	Tue	Wed
Time				
Morning	used	used	used	
Afternoon		used	A	B

此外，`\diagbox` 的表头内容还可以用 `\\\` 手工换行。此时通常需要对自动计算的表头高度进行手工调整。例如：

```

1 \begin{tabular}{|c|}
2 \hline
3 \diagbox[height=45pt]{line\\heads}{column\\heads} \\
4 \hline
5 \end{tabular}

```

line	column
heads	heads

5.3 对 `slashbox` 宏包的兼容性

在使用 `diagbox` 宏包时，会模拟 `slashbox` 宏包的功能，并禁止 `slashbox` 再被调用。

`diagbox` 宏包提供了与 `slashbox` 大致相同的 `\slashbox` 与 `\backslashslashbox` 两个命令。`\slashbox` 与 `\backslashslashbox` 的语法来自 `slashbox` 宏包，排版效果略有区别。这两个命令仅在旧文档中作为兼容命令使用。实际中使用 `\diagbox` 更为方便。

`\backslashslashbox` `\backslashslashbox` 基本功能与 `\diagbox` 类似。它带有两个可选参数，分别表示 `\diagbox` 中的 `width` 与 `trim` 选项。

`\slashbox` `\slashbox` 基本功能与 `\diagbox[dir=SW]` 类似。它也带有两个可选参数，表示 `\diagbox` 中的 `width` 和 `tirm` 选项。

例如：

alpha	A	B
num		
1	A1	B1
2	A2	B2

```
1 \begin{tabular}{|c|c|c|} \hline
2 \backslashbox[2cm]{num}{alpha}
3   & A & B \\ \hline
4 1 & A1 & B1 \\ \hline
5 2 & A2 & B2 \\ \hline
6 \end{tabular}
```

6 已知问题和未来版本

已知问题：

- `\slashbox` 与 `\backslashbox` 命令的效果与在 `slashbox` 宏包中不同。两个宏包在计算盒子宽度和高度时，使用了不同的算法；同时，在处理 `\slashbox` 第二个可选参数（即 `\diagbox` 的 `trim` 键）时，使用的方式也不一样。

这不是 bug。通常 `diagbox` 计算出的宽度比 `slashbox` 的结果更安全一些。

- `\diagbox` 生成的单元格必须是表列中最宽的一个。如果不能达到最宽，则画出的斜线不能保证在正确的位置。例如：

B
A
Very long term

```
1 \begin{tabular}{|c|} \hline
2 \diagbox{A}{B} \\ \hline
3 Very long term \\ \hline
4 \end{tabular}
```

此时可以手工设置较宽的 `\diagbox` 的 `width` 选项，解决此问题。

未尽的工作：

- 源代码的文档需要改进。特别是在 `\diagbox@triple` 中的宽度和高度计算算法需要详细说明。

7 Implementation / 代码实现

使用 key-value 界面。

```
1 \RequirePackage{keyval}
```

绘图依赖 pict2e 宏包。

```
2 \RequirePackage{pict2e}
```

计算依赖 fp 宏包。

```
3 \RequirePackage[nomessages]{fp}
```

分配用到的盒子寄存器。它们分别对应于 \diagbox 三个必选参数的内容。

```
4 \newbox\diagbox@boxa
```

```
5 \newbox\diagbox@boxb
```

```
6 \newbox\diagbox@boxm
```

分配长度变量。

```
7 \newdimen\diagbox@wd
```

```
8 \newdimen\diagbox@ht
```

```
9 \newdimen\diagbox@sep1
```

```
10 \newdimen\diagbox@sepr
```

定义 \diagbox 的键值选项。

```
11 \define@key{diagbox}{width}{%
```

```
12   \setlength{\diagbox@wd}{#1}}
```

```
13 \define@key{diagbox}{height}{%
```

```
14   \setlength{\diagbox@ht}{#1}}
```

```
15 \define@key{diagbox}{trim}{%
```

```
16   \otfor@\reserveda:=#1\do{%
```

```
17     \ifcsname diagbox@sep@\reserveda\endcsname
```

```
18       \setlength{\csname diagbox@sep@\reserveda\endcsname}{\z0}%
```

```
19     \else
```

```
20       \PackageError{diagbox}{Unknown trim option `#1'. }{l, r, lr and rl are supported. }%
```

```
21     \fi}
```

```
22 \define@key{diagbox}{dir}{%
```

```
23   \def\diagbox@dir{#1}%
```

```
24   \unless\ifcsname diagbox@dir@#1\endcsname
```

```
25     \PackageError{diagbox}{Unknown direction `#1'. }{NW, NE, SW, SE are supported. }%
```

```
26     \def\diagbox@dia{NW}%
```

```
27   \fi}
```

```
28 \let\diagbox@dir@SE\relax
```

```
29 \let\diagbox@dir@SW\relax
```

```
30 \let\diagbox@dir@NE\relax
```

```
31 \let\diagbox@dir@NW\relax
```

\diagbox@pict 这是带斜线的盒子本身。由一个 picture 环境实现。

```
32 \def\diagbox@pict{%
```

```
33   \unitlength\p@
```

```

34  \begin{picture}
35    (\strip@pt\dimexpr\diagbox@wd-\diagbox@sep1-\diagbox@sepr\relax,\strip@pt\diagbox@ht)
36    (\strip@pt\diagbox@sep1,0)
37    \nameuse{diagbox@\diagbox@part pict@\diagbox@dir}
38  \end{picture}

```

\diagbox@double@pict@SE 方向为 SE 的斜线盒子内容。

```

39 \def\diagbox@double@pict@SE{%
40   \put(0,0) {\makebox(0,0)[bl]{\box\diagbox@boxa}}
41   \put(\strip@pt\diagbox@wd,\strip@pt\diagbox@ht) {\makebox(0,0)[tr]{\box\diagbox@boxb}}
42   \Line(0,\strip@pt\diagbox@ht)(\strip@pt\diagbox@wd,0)

```

\diagbox@double@pict@NW 方向 NW 与 SE 相同。

```
43 \let\diagbox@double@pict@NW\diagbox@double@pict@SE
```

\diagbox@double@pict@NE 方向为 NE 的斜线盒子内容。

```

44 \def\diagbox@double@pict@NE{%
45   \put(0,\strip@pt\diagbox@ht) {\makebox(0,0)[tl]{\box\diagbox@boxa}}
46   \put(\strip@pt\diagbox@wd,0) {\makebox(0,0)[br]{\box\diagbox@boxb}}
47   \Line(0,0)(\strip@pt\diagbox@wd,\strip@pt\diagbox@ht)

```

\diagbox@double@pict@NE 方向 SW 与 NE 相同。

```
48 \let\diagbox@double@pict@SW\diagbox@double@pict@NE
```

\diagbox@double 分成两部分的盒子。三个参数，分别为 key-value 格式的可选项、左半边内容、右半边内容。这里的主要工作是读入参数并计算斜线盒子的大小。

```

```

版本历史

v1.0	\diagbox: 判断参数个数, 选择两部分或三部分盒子。	13
General: 初始版本。	1	
v2.0	\diagbox@double: 在使用 trim 选项时去掉内容与盒子边界的间距。这与 slashbox 的行为不同。	10
General: 变更 trim 选项的行为, 去掉了使用 trim 选项时内部的间距。这与 slashbox 行为不同。	7	
增加有三部分、双斜线的表头格式。	6	
	\diagbox@triplebox: 新增三部分双斜线的盒子	12

Index / 代码索引

斜体的数字表示对应项说明所在的页码。下划线的数字表示定义所在的代码行号；而直立体的数字表示对应项使用时所在的行号。
