NAME

t1dotlessj – create a dotless-j PostScript Type 1 font

SYNOPSIS

t1dotlessj [OPTIONS...] *font* [*outputfile*]

DESCRIPTION

T1dotlessj creates a PostScript Type 1 font whose only character is a dotless 'j' matching the input font's design. It works simply by removing the dot from the input font's 'j'. The output font has three characters: '.notdef', 'space', and 'uni0237', where 'uni0237' is the dotless 'j'. The command fails if the input font already has a dotless 'j' character, or if there seems to be no dot to remove. T1dotlessj writes the created PFA or PFB font to the standard output (but see the **−−output** option); if no input file is supplied, it reads a PFA or PFB font from the standard input.

OPTIONS

−−output=*file*, **−o** *file*

Send output to *file* instead of standard output.

−−pfb, **−b**

Output a PFB font. This is the default.

−−pfa, **−a**

Output a PFA font.

−−name=*name*, **−n** *name*

Set the output font's PostScript name to *name*. The default is *InputFontName*LCDFJ.

−q, **−−quiet**

Do not generate any error messages.

−h, **−−help**

Print usage information and exit.

−v, **−−version**

Print the version number and some short non-warranty information and exit.

RETURN VALUES

T1dotlessj exits with one of the following values:

0   A dotless-j font was successfully generated.

1   The font already contained a dotless-j character.

2   The font's "j" character had no dot to remove.

3   The font had no "j" character.

>3   An error occurred.
